## Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Summary Reference Index* (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

*CANSIM Main Base Series Directory* (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

*CANSIM Mini Base Series Directory* (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
G. Bériault-Prud'homme – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

# Library Visitors and Library Resources

Anne Bowen*

This article will briefly examine adult library users, the estimated number of visits they made to a library, and the library resources available for this activity.[1] It is designed to provide some basic information on the complex relationship between the use and demand for public library services.

## Source of Data

The data on library users and visits originate from a survey on Selected Leisure Activities (SLA)[2] conducted by Statistics Canada in October 1975 as a supplement to the monthly Labour Force Survey (LFS). The LFS covered the ten provinces and included the non-institutional civilian population aged 14 years and over. The SLA questionnaire was distributed to approximately half of the original 35,000 households selected for the LFS and about 32,000 individuals responded to the SLA.

## Limitations

Individuals who could not respond for reasons such as health or travel were averaged in with the respondents; those who did not respond to the question on library visits were excluded in the analysis. Consequently the number indicating a visit to a library should be treated as a minimum estimate since some of the individuals who did not respond may have been in fact library visitors.[3]

Although the activity reported was to have taken place during the respondent's leisure time, the wording of the question on library visits did not indicate specifically if the visit had been made to a "public library".

## Library Users

The information collected in the SLA revealed that approximately 4.4 million Canadians (1 in 4) aged 14 years and over used a library during their leisure time in the twelve months period preceding October 1975. Library users by region are presented in Table I.

The proportion of library users within a province varies considerably. The highest proportion is found in British Columbia where 40 per cent of the responding population used a library, and the lowest proportion (18 per cent) is found in Quebec. The regional variations are quite distinct and the Canadian average (29 per cent) should be considered in relation to these regional differences.

Table II compares the percentage distribution of the total survey population and the user population by region. About 37 per cent of the total responding population live in Ontario but 44 per cent of the user population live in that province. British Columbia also has a higher ratio of the visiting population to total population though the small population size limits the effect of the increased library activity on the overall percentage distribution of users. The Atlantic region and Quebec have smaller ratios of users to total population for all regions.

The patterns of visiting for regular and occasional library users are based on visiting habits over 2 two-month periods: July-August 1975 and September-

---

* Anne Bowen is a research analyst with the Cultural Institutions Section, Education, Science and Culture Division, Statistics Canada.

[1] For more information on library resources consult *Public Libraries in Canada, 1974* (Catalogue 81-205), Statistics Canada.

[2] The SLA questionnaire covered a variety of activities from attending a ballet performance to watching television. The information collected can be broken down by such background characteristics of the survey population as size of community, province of residence, sex, education, income range and occupation, to mention only a few.

[3] In Table I however, the proportion visiting may be over-represented because only the responding population is included.

Table I. Responding Adult Population, Users and Percentage Distribution of Users, by Region

| Region | Responding Adult Population* | Adult Users | Per Cent of Adults Who Are Users |
|---|---|---|---|
| | '000 | '000 | % |
| Atlantic | 1,368.0 | 300.7 | 22.0 |
| Quebec | 4,350.2 | 788.6 | 18.1 |
| Ontario | 5,628.2 | 1,965.5 | 34.9 |
| Central | 2,311.1 | 715.9 | 31.0 |
| British Columbia | 1,671.2 | 668.6 | 40.0 |
| Canada | 15,328.8 | 4,439.2 | 28.9 |

* Non respondents total about 1.8 million.

Table II. Percentage Distribution of Adult Population and Users, by Region

| Region | Adult Population | Per Cent of Total Users |
|---|---|---|
| | % | % |
| Atlantic | 8.9 | 6.8 |
| Quebec | 28.3 | 17.8 |
| Ontario | 36.7 | 44.3 |
| Central | 15.1 | 16.1 |
| British Columbia | 10.9 | 15.0 |
| Canada | 100.0 | 100.0 |

Table III. Proportion of Regular and Occasional Library Users, by Region

| Region | Regular | Occasional |
|---|---|---|
| | % | % |
| Atlantic | 50.3 | 49.7 |
| Quebec | 44.7 | 55.3 |
| Ontario | 61.4 | 38.6 |
| Central | 53.5 | 46.5 |
| British Columbia | 62.0 | 38.0 |
| Canada | 56.5 | 43.5 |

October 1975.[4] Table III examines the proportion of regular and occasional library users by region. About 57 per cent of library users indicated regular library visits.[5] This proportion rises to just over 60 per cent in Ontario and British Columbia and falls to 50 per cent in the Atlantic region and 44 per cent in Quebec. These fluctuations in regular visiting patterns for regions affect the estimates of yearly visits to the library. The Central region has a high proportion of the adult population using the library, but their less frequent visits to the library affect the regional estimate for average number of yearly visits.

Table IV shows these yearly visit estimates. The 4.4 million users made an estimated 54.9 million library visits during the twelve month period prior to the study. For Canada as a whole, the average number of visits for users is just slightly more than one per month. Ontario and British Columbia have somewhat higher average yearly visits. These higher averages are expected given the higher proportion of users in these regions and the frequency of their visits. Although the Central region has a high proportion of users, the lower number of regular users in this group reduces the average number of yearly visits to less than the Canadian average.

The figures for Quebec are somewhat unique. The average number of yearly visits is 11.2 which is approximately 1 less visit a year than the overall average of 12.4 visits a year for all regions. Since Quebec has a lower participation rate than other regions and the highest proportion of occasional users, the high number of visits made by regular users is probably an important factor in this estimate of yearly visits.

## Library Resources

This section examines the library resources available for users. Ratios for total operating costs, expenditures on new material, library staff, circulation and holdings per user, per visit, and per capita are summarized for the adult population.[6] These ratios are by no means an exhaustive treatment of resources available. They are, however, some indicators available from the survey of public libraries. The Statistics Canada survey on public libraries does not include user figures to compare with the reported figures from the SLA survey. Consequently individual institutions' figures on users and operating cost estimates may be at considerable variance with these average estimates. They may also include such factors as statistics for children using the library which are not included in the SLA estimates.

Table V gives the estimated total operating expenditures per adult, per adult user and per adult visit. For the Canadian population the total operating cost ratio per adult is an estimated $6.30. The regional variations are quite distinct, from a low ratio of $2.20 in Quebec to a high of $9.90 in Ontario. For each adult *user* the estimated ratio is $24.10 for Canada as a whole. Ontario's ratio is $7.00 above this average giving it the highest operating expenditure to adult user ratio for all regions. Except for Quebec all other regions have expenditure to user ratios fairly close to the overall average total expenditure ratio. The Atlantic region has a low expenditure to total adult population ratio, but the expenditure to user ratio is not substantially below the ratio for all regions due to the lower proportion of users in this region.

The operating expenditures per adult *visit* to a library is estimated at $1.90 for Canada. Again there is considerable regional variation. British Columbia has an expenditure to adult visit ratio of $1.50, which is well below the overall average expenditure and considerably lower than Ontario's ratio of $2.50 a visit despite the regional similarities in library use.

In Table VI the new material expenditures are estimated per adult user, visit, and total adult population. Since expenditures on new materials are part of the public libraries' total operating budget, this expenditure does not appear to be the major part of the total operating budget. For the survey population as a whole, $1.20 was spent on the purchase of new materials as opposed to the total operating expenditure of $6.30. When these estimates are examined in terms of the distribution of the Canadian adult population, the Atlantic region and Quebec are considerably below the average and Ontario is considerably above the average, a distribution evident in the estimated ratios of total operating costs discussed with Table V.

---

[4] Since the number of visits is only available for the two periods July-August and September-October the visits for the year are estimated for the additional eight months. Regular users visited the library at least once during both periods. Their total number of visits were averaged for the four months and this average was the estimate used for the additional eight month period. Occasional users visited the library less frequently than once in every two month period. The total visits for those that did visit in one of the periods surveyed were used to estimate the visits of occasional users who visited the library at other periods than the times studied.

[5] The distinction between "users" and the estimated "visits" made by these users is adopted throughout this article for the purpose of clarity. It is of course assumed that patterns of visiting can be described as patterns of use.

[6] See footnote 5 for an explanation of the terms "adult user" and "adult visit".

Table IV. Estimated Total Visits for the Year*, Average Number of Yearly Visits and Proportion of Total Visits, by Region

| Region | Estimated Number of Yearly Visits | Average Number of Yearly Visits | Proportion of Total Visits |
|---|---|---|---|
| | '000 | | % |
| Atlantic | 3,680.9 | 12.2 | 6.7 |
| Quebec | 8,834.5 | 11.2 | 16.1 |
| Ontario | 25,062.5 | 12.8 | 45.7 |
| Central | 8,251.4 | 11.5 | 15.1 |
| British Columbia | 9,048.4 | 13.5 | 16.4 |
| Canada | 54,877.7 | 12.4 | 100.0 |

* This estimate includes both regular and occasional library users 14 years of age and older.

Table V. Estimated Total Operating Expenditures per Adult Population, User and per Visit to the Library, by Region

| Region | Adult Population | Adult User | Adult Visit |
|---|---|---|---|
| | $ | $ | $ |
| Atlantic | 3.90 | 20.20 | 1.70 |
| Quebec | 2.20 | 13.20 | 1.20 |
| Ontario | 9.90 | 31.40 | 2.50 |
| Central | 5.90 | 21.90 | 1.90 |
| British Columbia | 7.10 | 20.00 | 1.50 |
| Canada | 6.30 | 24.10 | 1.90 |

Table VI. Estimated Total Expenditures on New Material per Adult Population, User and Visit to the Library, by Region

| Region | Adult Population | Adult User | Adult Visit |
|---|---|---|---|
| | $ | $ | $ |
| Atlantic | 0.84 | 4.30 | 0.35 |
| Quebec | 0.37 | 2.30 | 0.20 |
| Ontario | 1.80 | 5.60 | 0.44 |
| Central | 1.20 | 4.30 | 0.37 |
| British Columbia | 1.40 | 3.90 | 0.29 |
| Canada | 1.20 | 4.50 | 0.35 |

Table VII. Estimated Total Expenditures on Personnel* per Adult Population, User and Visit to the Library, by Region

| Region | Adult Population | Adult User | Adult Visit |
|---|---|---|---|
| | $ | $ | $ |
| Atlantic | 2.40 | 12.50 | 1.00 |
| Quebec | 1.20 | 7.40 | 0.70 |
| Ontario | 6.00 | 18.90 | 1.50 |
| Central | 3.80 | 13.90 | 1.20 |
| British Columbia | 4.60 | 13.00 | 1.00 |
| Canada | 3.80 | 14.80 | 1.20 |

* This includes all professional and non-professional personnel.

The expenditures on new materials for each user is estimated at $4.50 for the regions. The ratios range from a high of $5.60 in Ontario to a low of $2.30 in Quebec. In British Columbia the average expenditure on new material is lower than the Canadian average, though this province has the highest proportion of the population using the library. The estimated costs of new material for each visit to the library are less than 50 cents a visit in every province. The regional variations are consistent with the pattern established for user estimates of new material purchases.

In Table VII the total expenditures on personnel are estimated per adult user, visit, and for the total adult population. Personnel expenditures are seen to be more than half the total operating expenditures for all regions and approximately two thirds of the total operating expenditures in some areas. The variations for personnel costs by region are similar to the pattern noted for total operating expenditures and expenditures on new material. The overall ratio for each user is $14.80 with the only substantial regional differences noted in the high ratio for Ontario and the low ratio for Quebec. For each visit an estimated $1.20 is spent on personnel costs which represents about 63 per cent of the total operating budget for all regions.

Since financial expenditures present only one perspective on the resources available for library users, book holdings and circulation of material can be examined per adult and user populations. The book holdings available to potential library users, examined in Table VIII, indicate that there are almost two books available for borrowing by every adult Canadian. The regional variations are similar to those already discussed in the tables on the financial ratios. However, the circulation of library material for the adult population reflects a slightly different pattern of regional variations. Ontario has the highest number of holdings available for each adult, but British Columbia has the highest circulation figures for each adult. This difference is probably accounted for in the different borrowing patterns which exist between the provinces. The high circulation ratio of 8.7 items in British Columbia for every adult is twice

Table VIII. Estimated Circulations and Book Holdings per Adult Population and per User, by Region

| Region | Adult Population | | Adult User | |
|---|---|---|---|---|
| | Book Holdings | Circulations | Book Holdings | Circulations |
| Atlantic | 1.5 | 4.5 | 7.5 | 23.0 |
| Quebec | 1.0 | 2.3 | 6.3 | 14.0 |
| Ontario | 2.6 | 8.0 | 8.3 | 25.3 |
| Central | 2.0 | 6.3 | 7.4 | 23.3 |
| British Columbia | 2.1 | 8.7 | 5.8 | 24.3 |
| Canada | 1.9 | 5.9 | 7.4 | 22.7 |

the circulation figure for the Atlantic region and three times the ratio for Quebec, for example.

Book holdings and circulation ratios for the user population indicate that almost 7 books are held for each user and the average number of circulations per book is 23 a year. Again, the regional variations in the proportion of users and the frequency of their visits reduces the variations in the ratios per user.

In summarizing the data presented it is apparent that the regional patterns of library use are not always reflected in regional commitments to fund public libraries. The largest per capita expenditures are in those regions with the highest participation rates, but at the user level this pattern of funding is not maintained, particularly in Ontario and Quebec. Ontario has consistently higher per user expenditure ratios than other regions and Quebec's are consistently lower. By comparison the remaining regions have similar expenditure ratios at the user level.

Book holdings and circulation of material are indicators of the actual use being made of public library resources. The per capita holdings and circulation of material indicate that Ontario has the highest per capita holdings but British Columbia has the highest per capita circulation ratio. In terms of book holdings per user however, British Columbia has the lowest ratio of holdings for all regions. This low ratio of holdings does not affect the circulation of material to users which is fairly consistent for all areas except Quebec.

The differences in the use and funding of public libraries result from the influence of any number of factors including the availability of library facilities, frequency of visits, and patterns of borrowing. Also reading preferences and the willingness to buy reading material will affect the proportion of the reading public using public library facilities.

This presentation is limited in scope. More analysis of the SLA survey results of library users should be undertaken. A study of the characteristics of library users is currently in progress and the general survey results of leisure time activities has just been released by the Department of the Secretary of State.

The use of public libraries as part of a broader survey on readership in the Canadian population is currently in the planning stages. This broader look at the characteristics of readers and non-readers, and an overview of the material Canadians do read should provide some valuable information on the library services needed in the future. ■

# Observations

## Operating Results of Small Businesses

The Merchandising and Services Division of Statistics Canada has initiated a new series of reports that will help small businesses to measure their performance against that of their field as a whole, nationally and by province. The studies will cover various kinds of businesses and it is hoped they will be of value not only to today's merchants but also to the men and women who may be contemplating entering into one or another of the trades which comprise the merchandising and services sectors.

The first in the series has just been published and is titled *Operating Results: Men's Retail Clothing Stores, 1974*. It presents mean and median data for key business costs and results as a proportion of sales. The categories of information reported are: net sales; opening inventory; purchases; closing inventory; costs of goods sold; gross profit; employees salaries and wages; employees benefits; property taxes; rent; business taxes, permits and licenses; insurances; interest, exchange and bank charges; depreciation; advertising; repairs and maintenance; legal and auditing fees; office and store supplies; telephone, heat, light and water; delivery, express and freight; travel and entertainment; all other expenses; total, all expenses; and net profit.

For further information about this series, contact David Van Luven (613-996-9301), Analysis and Development Section, Merchandising and Services Division, Statistics Canada, Ottawa K1A 0T6.

Copies of *Operating Results: Men's Retail Clothing Stores, 1974* (Catalogue 63-603) are available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: 70 cents. ☐

## Health Manpower

A new title has been added to the series of reports titled *Health Manpower*. The objectives of this new annual survey are to provide statistical data on the socio-economic and demographic characteristics of qualified dental hygienists who reside and practice in Canada, and to disseminate information to manpower planning groups and other users as a source of data for analysis and special studies. The new report presents basic distributions and cross-classifications of these characteristics.

Inquiries about this report should be addressed to F. Grabowiecki (613-995-0984), Health Manpower Statistics Section, Health Division, Statistics Canada, Ottawa K1A 0T6.

Copies of *Health Manpower – Dental Hygienists, 1976* (Catalogue 83-230) can be obtained from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: 70 cents. ☐

## Centralized School Libraries

Summary statistics for centralized libraries in Canadian elementary and secondary public schools for the academic year 1974-75 were recently released by the Education, Science and Culture Division. They are available in a new publication titled *Culture Statistics: Centralized School Libraries in Canada, 1974-75*. It provides summary information, by province, on the number of schools and enrolment, the number of schools reporting centralized libraries and their enrolment, library size and seating capacity, full-time librarians and expenditures for library materials and reports on print and non-print holdings.

It also presents summary statistics for Canada (excluding Quebec), by type of school, on the number of schools and enrolment, the number of schools reporting centralized libraries and their enrolment, book holdings, full-time librarians and print and non-print expenditures. It contains ratios for Canada (excluding Quebec), by type of schools, expressing the proportion of schools with centralized libraries, the proportion of pupils attending schools with centralized libraries, book holdings per pupil, pupils per full-time librarian and expenditures per pupil for print and non-print materials.

Inquiries about this new report should be addressed to Louis Meduri (613-995-9695), Cultural Institutions

Section, Education, Science and Culture Division, Statistics Canada, Ottawa K1A 0T6.

Copies of *Culture Statistics: Centralized School Libraries in Canada, 1974-75* (Catalogue 87-650) are available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: 70 cents. □

## Gun Ownership and Use

In August 1976, Statistics Canada questioned approximately 65,000 Canadians over age 14, living in 31,000 different households, about their ownership and use of firearms. This survey was undertaken at the request and with the financial support of the federal Ministry of the Solicitor General as a supplement to the monthly Labour Force Survey. The purpose of this supplementary survey was to provide statistics on private (household) gun ownership and use by Canadian residents. Material from this survey will be used in research on gun control by government and law enforcement agencies and to inform the public.

The statistical information gathered in this sample survey provided the basis for calculating estimates of the full extent of gun ownership and use in Canada. These estimates are presented in a bulletin titled *Statistics of Estimated Gun Ownership and Use in Canada* (Catalogue 85-001, Vol.5, No. 5).

More information about these estimated figures can be obtained from Paul Reed (613-995-0746), Justice Statistics Division, Statistics Canada, Ottawa K1A 0T6.

A free copy of this bulletin is available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. □

## Senior Staff Change at Statistics Canada

George W. Andrews, Director General, Industry Statistics Branch, Business Statistics Field, recently retired after 32 years of service in the Public Service, 17 of which were spent with Statistics Canada.

Born in Port Arthur, Ontario, he served in World War II from 1940 to 1946 with the Royal Canadian Artillery and he still retains the rank of Lieutenant-Colonel. Following the war, he attended the Universities of New Brunswick and Toronto and received degrees in Forestry and Forestry Economics.

He joined the Federal Department of Forestry in 1952 and remained with that department until coming to the Dominion Bureau of Statistics (now Statistics Canada) in 1960 as Chief of the Primary Industries Section in the Manufacturing and Merchandising Division. He was appointed Assistant Director in 1965 and subsequently named Director in 1967. He served in that position until he was appointed Director General in 1972. A source of innovation and leadership throughout his career, he was a major influence in implementing a number of projects which were of benefit to the bureau. ■

## Selected Economic Indicators — Seasonally Adjusted

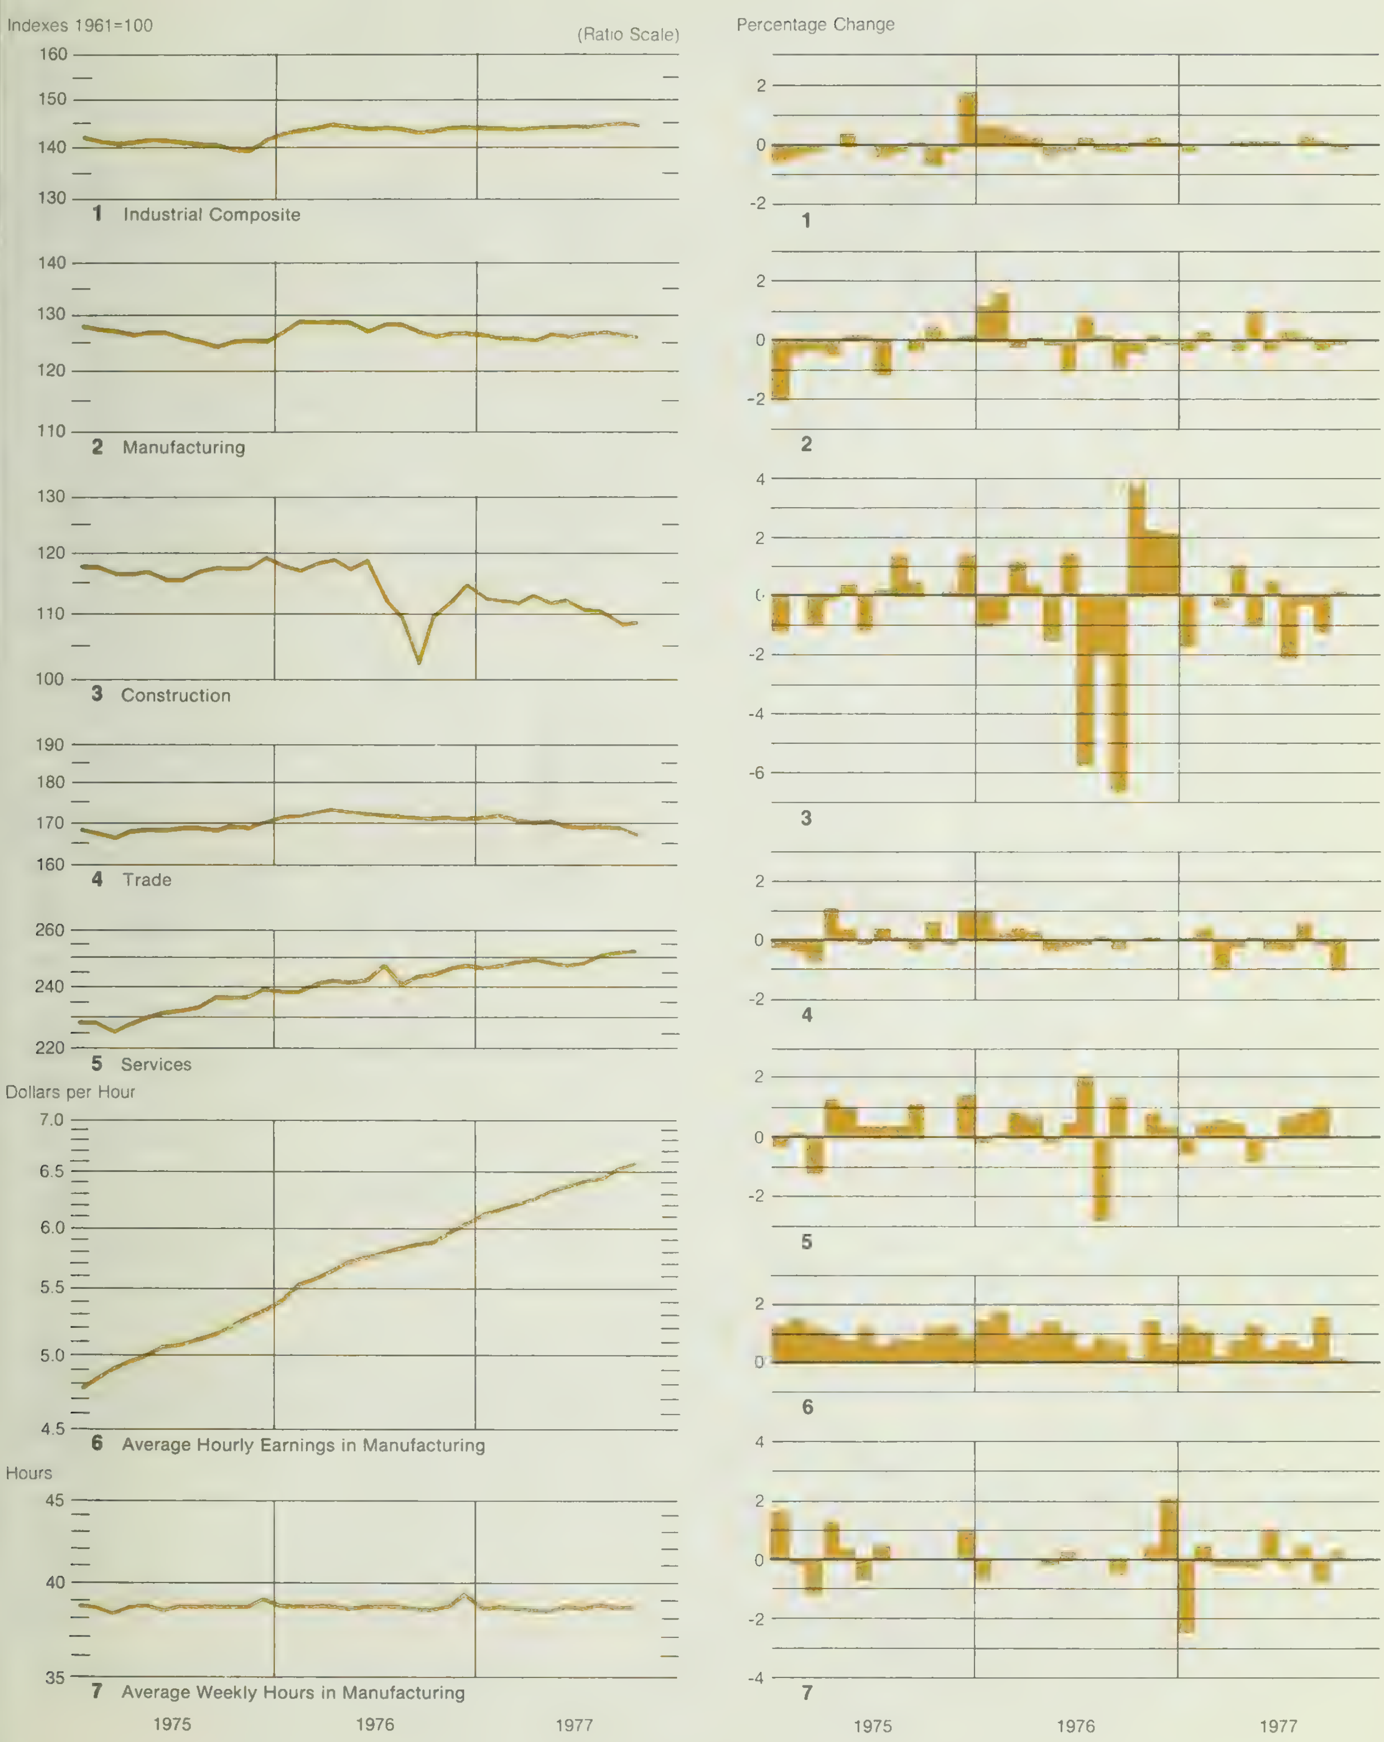
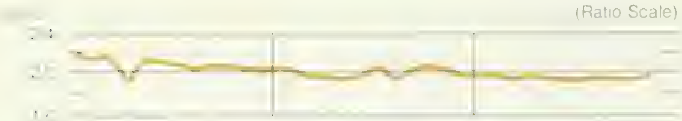
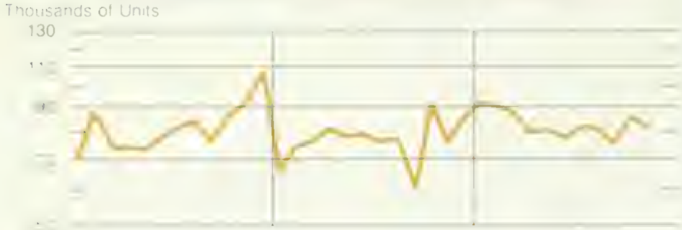
**Employment Indexes, 1961=100**



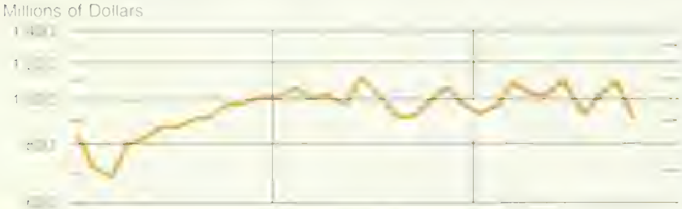
# Selected Economic Indicators — Seasonally Adjusted



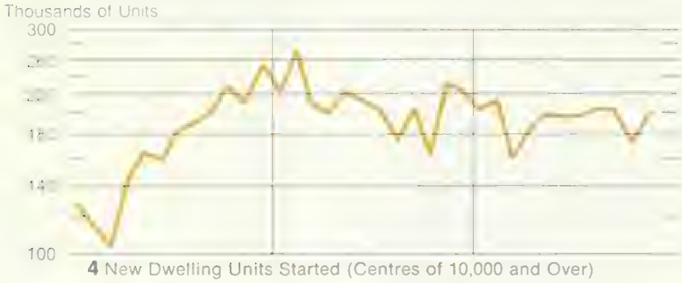
**1** Ratio of Manufacturing Inventories Owned to Shipments



**2** New Passenger Car Sales

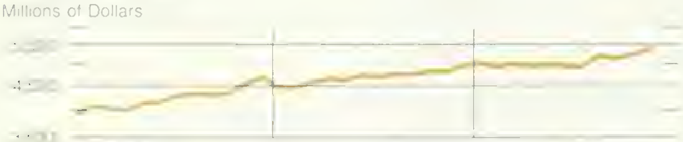


**3** Value of Building Permits

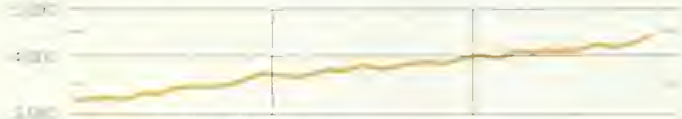


**4** New Dwelling Units Started (Centres of 10,000 and Over)

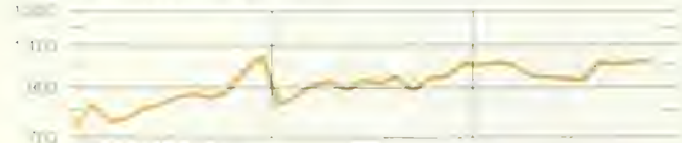
**Value of Retail Trade**



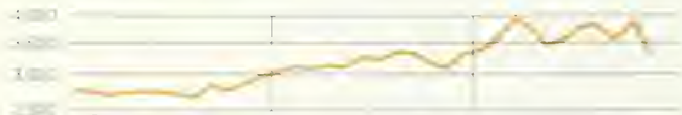
**5** Total



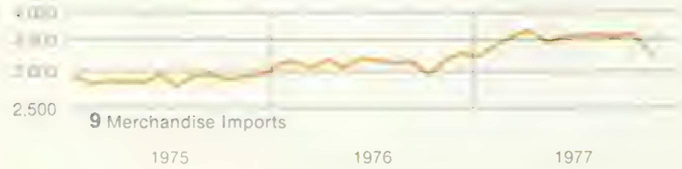
**6** Total Ex Motor Vehicles



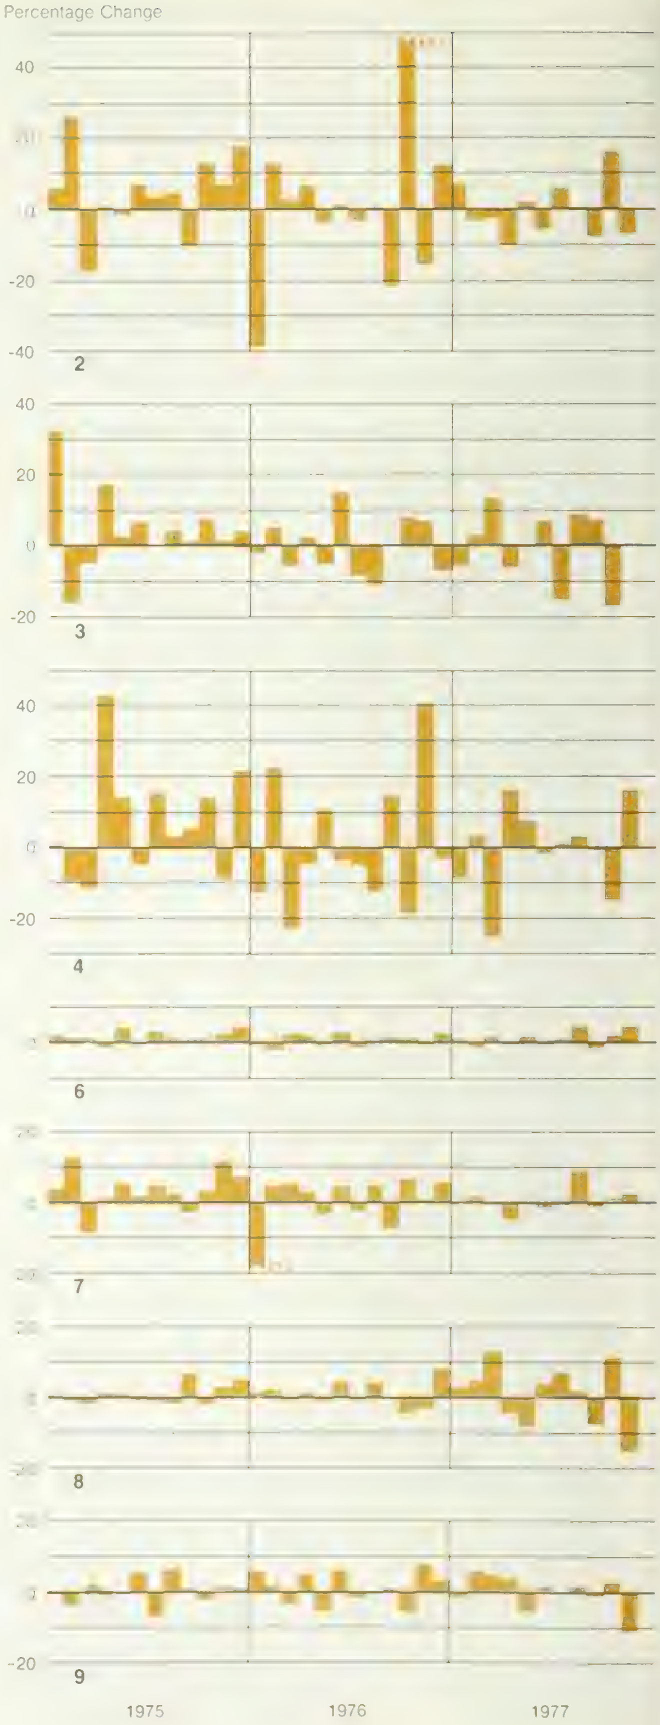
**7** Motor Vehicles



**8** Merchandise Exports (Including Re-Exports)

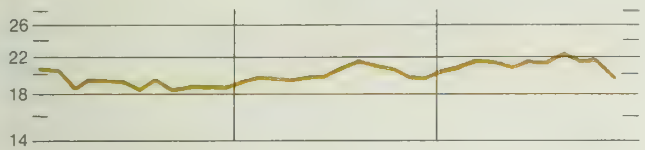


**9** Merchandise Imports



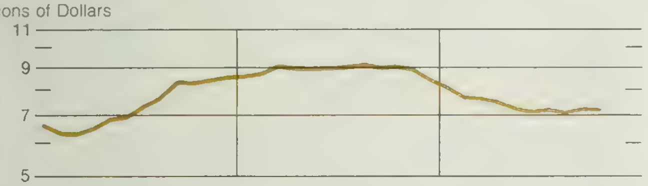
## Selected Economic Indicators

Millions of Tons *(Adjusted for Seasonality)* (Ratio Scale)

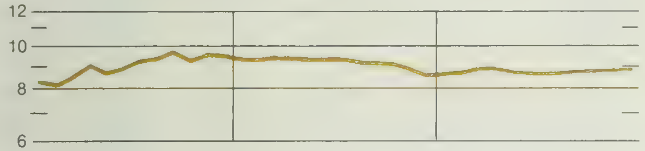


**1** Rail Revenue Freight Loaded

Millions of Dollars

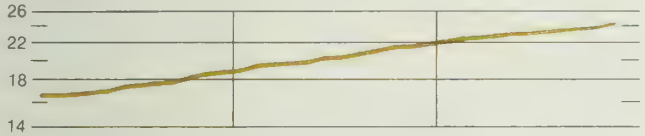


**2** Three Month Treasury Bill Yield



**3** Govt. of Canada Average Bond Yield (10 Years and Over)

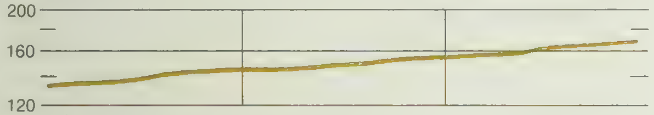
Billions of Dollars



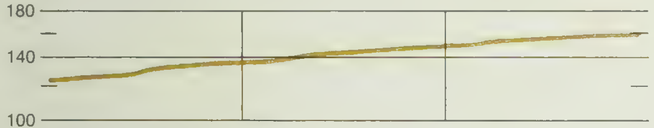
**4** Consumer Credit (Total Monthly Reporters)

**Price Indexes**

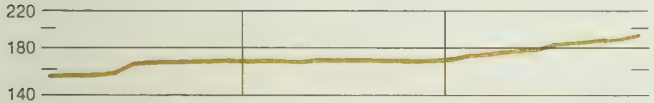
Indexes 1971=100 *(Not Adjusted for Seasonality)*



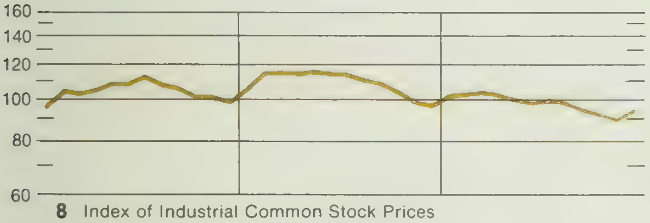
**5** Consumer Price Index, Total



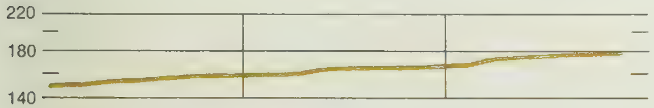
**6** Total Ex Food



**7** Food



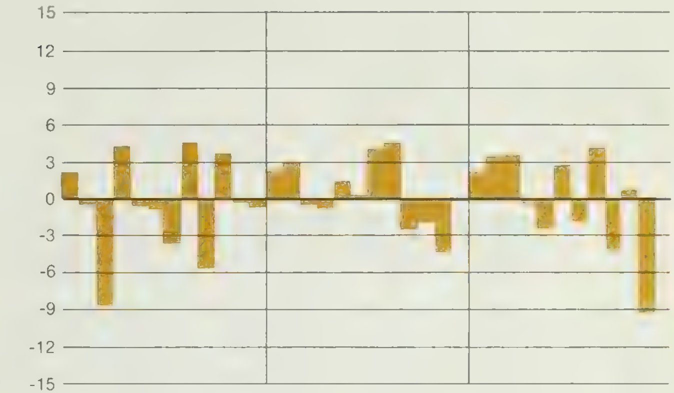
**8** Index of Industrial Common Stock Prices



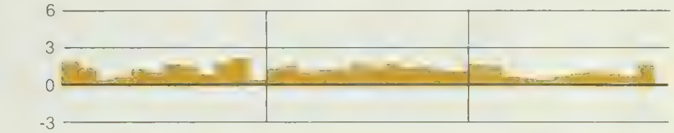
**9** Industry Selling Price Index (Gross Weighted Total)

1975 1976 1977

Percentage Change *(Adjusted for Seasonality)*



**1**



**4**

**Price Indexes** *(Not Adusted for Seasonality)*

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

---

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. The counts for the year 1975 are provisional while those for the succeeding years are estimates. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

# Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

## 1–Income and expenditure accounts

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

**For source see Table 1.9.**

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change

**For source see Table 1.9.**

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation)

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups from January 1973 forward are based on the 1970 Standard Industrial Classification. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 3 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

---

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 11. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 10. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.
[4] Except machinery and transportation equipment industries.

---

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements.

## Section 6 · Manufacturing

70 1. Total Inventories, Shipments and Orders in Manufacturing
71 2. Manufacturing Shipments by Industry
73 3. Manufacturing Inventories by Industry
75 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
76 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
77 6. Estimated Value of Goods in Process and Finished Products by Economic Use Classification
78 7. Tobacco and Beverages
78 8. Rubber
79 9. Rubber Products
79 10. Raw Hides, Skins and Finished Leather
80 11. Footwear Production
81 12. Production of Sawn Lumber
81 13. Pulpwood, Wood Pulp and Newsprint
82 14. Primary Iron and Steel
83 15. New Motor Vehicles
84 16. Refrigerators, Freezers, Washing Machines and Clothes Dryers
84 17. Radio and Television Receiving Sets

## Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

| | | | | Inventory at end of month | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | All inventory held | | | | |
| Annual average and month | Shipments[1] | New orders received during month[2] | Unfilled orders at end of month | Owned[3] | Held but not owned | Total | Raw materials | Goods in process | Finished products | Ratio of inventories owned to shipments |
| D | 310000 | 310060 | 310106 | 310336 | 310382 | 310152 | 310198 | 310244 | 310290 | 310530 |
| D | 310030 | 310083 | 310129 | 310359 | 310389 | 310175 | 310221 | 310267 | 310313 | 310531 |
| 1975 | 7,371.3 | 7,311.4 | 10,876.9 | 15,550.5 | 816.7 | 16,367.2 | 7,092.1 | 4,175.2 | 5,099.9 | 2.12 |

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

---

[1] Because the supplementary classification for automotive products consist of industries which are also included in the appropriate economic use group this series is inclusive of those aggregated for the Canada total. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products

A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act

Note: Components may not add to totals due to rounding. [1]The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2]The above table covers all sales to users and includes sales by manufacturers through their dealers and agents as well as the sales of importers made directly to users. Even though sales are to users, i.e. farmers, values are stated at the dealer's net buying price or at wholesale price

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood pudding etc. [6] Includes solid, coated, bulk, packages and novelties.

---

Note Components may not add to totals because of rounding

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

## Section 12 · Transportation

122 1. Carloadings of Revenue Freight
123 2. Operating Statistics of Canadian Railways
123 3. Operating Statistics of Air Carriers in Canada
124 4. Operating Statistics of Canadian Pipelines
124 5. Shipping Traffic

## Table 1: Carloadings of revenue freight on Canadian railways[1] (thousand cars)

| Year and month | Total railway revenue freight loadings (carload and non-carload) ('000 tons) |  | Total revenue cars loaded (carload only) | Farm products and food |  |  |  |  |  | Mine products |  |  |  |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
|  | unadj. | S.A. |  | Wheat | Other grain and grain products | Fresh fruits and vegetables | Other agriculture products | Animals and their products | Prepared food products | Iron ore and concentrates | Other metal ores and concentrates | Potash | Coal, sand, cement and other mine products |

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series

---

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may ot remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ordinary sales in Canada. [3] Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts.

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines

---

The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British olumbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with e statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Summary Reference Index* (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

*CANSIM Main Base Series Directory* (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

*CANSIM Mini Base Series Directory* (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
– Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review*, Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

# Research Potential of Data from the Travel-to-Work Surveys

J.S. Lewis and F.S. Jones*

## Introduction

The Travel-to-Work supplements to the Labour Force Surveys in November 1973, 1974 and 1976, and October 1975 offer the potential for research on commuting activity in specific urban areas. The purpose of this paper is to first, assess the utility of the data for this category of research, given that the information source is not designed for studies of urban areas; secondly, to demonstrate an application by presenting the results of a specific analysis; and thirdly, to invite analysts to try out an experimental service designed to enable access to a previously inaccessible data base.

So far, work has been concentrated on the preparation of the 1973, 1974 and 1975 data base for urban research. The 1976 Survey sample is larger and contains about three times as many questions so that, if the utility of the first three surveys can be established, the usefulness of the 1976 data should be even greater.

## The Problem and Implications for Urban Research

The most general problem in using the information for urban research stems from the design of the source survey. The major objective of the Labour Force Survey is to produce reliable estimates at the provincial and national levels. Thus the sample is thin for specific urban areas and, although the sample is drawn from several sub-metro areas called sub-units which exhaust the territory of the census metropolitan area, many areas within sub-units are not sampled. Sometimes the most rapidly growing suburbs of a metropolitan area do not fall within the sampling frames while older declining areas remain heavily represented.

While these features of the sampling frame would tend to balance out at the provincial level they could be a source of bias in any particular metropolitan area. Another problem is that sampling weights are based on the provincial age-sex structure of the population and there is frequently substantial variation in this respect between inner city and periphery areas and between rapidly growing and slow-growth metropolitan areas. Even the boundaries of the metropolitan areas are a potential source of bias. In the survey years up to and including 1975 the census metropolitan areas, as defined using 1966 census data, are used and in many cases the labour market area extends considerably beyond the census boundary.

Partly for these reasons very few characteristics of metropolitan area sub-populations are tabulated and released. The only other source of information from the Travel-to-Work Surveys is in the form of microdata files containing information on individual commuters. While these contain most of the demographic information collected in the regular Labour Force Survey plus the characteristics on commuting experience, a notable piece of excluded information is the specific place of residence of the commuter. In order to preserve the confidentiality of individual respondents, the place of residence is coded to the type of urban or rural area and specific sub-metropolitan areas are not identified. This means that commuting activity within specific metropolitan areas cannot be analysed, compared and contrasted. Also, the commuting experience of inner-city residents cannot be distinguished from that of suburban residents. Both inter and intra-metropolitan area differences in commuting behaviour are expected to be substantial as a result of unmeasured factors associated with specific cities and sub-city areas: physical setting, the spatial distribution of jobs and residences, the layout of the transportation system, the preferences, behaviours and incomes of the populations, and the policies of local government. Even if it were possible to access information on the specific metropolitan area, there remains the question of whether or not the sample size at this geographic level is large enough to yield any reliable information. This is a fundamental limitation to the level of geographic detail which can be utilized.

---

* J.S. Lewis is a Statistician on the staff of the Structural Analysis Division; F.S. Jones is an Economist on the staff of the Regional and Urban Research and Development Division.

## Accessing Urban Information

For most types of analysis there is no need for the examination of individual records. The interest is mainly to use information contained on the records for the purpose of estimating general statistics and the coefficients and test statistics of linear or non-linear models. Although some characteristics which are input to the models may be interpreted as likely to identify individual respondents, the outputs of the models cannot be put to such use. Even the input characteristics, if summarized first in the form of means, standard deviations and correlation coefficients, could not be used to identify individual respondents. Such summary statistics are all that is needed to estimate linear models which form the basis of most research efforts.

The approach adopted to initiate the development of a data base was to prepare Metropolitan Area data files for Montreal, Toronto, Winnipeg, Edmonton and Vancouver. These files contain for each commuter in the 1973, 1974 and 1975 surveys, demographic characteristics, variables on commuting experience (distance to work, mode of travel, availability of public transportation to work, and the time required to go to work both by public transportation and the usual mode), the area of residence and the year of the survey. Sub-metro areas were developed by first denoting on a map the centre of the city and then adding together the sub-units falling within two miles of the centre to form a zone called the *core*, then adding together more distant sub-units until half of the metropolitan area's sub-units (roughly half the sample) were included. This division formed the *inner city* and the *periphery*. The three zones of Montreal and Toronto are portrayed on the maps presented on page xi.

Although the file cannot be released to the public, it can be used to satisfy many types of requests for analytical studies and at a fraction of the cost that would be involved in processing the source files. Given a specification of a sub-population, a set of variables to be analysed and the type of model desired, the data may be readily prepared and the analysis performed. The sample size may be a constraining factor for some type of analysis; unfortunately this often cannot be assessed until an analysis is attempted. Some of the guesswork will be reduced with experience as more awareness of the potential and limitations of the data base is acquired. The analysis reported in the last section of this article intends to illustrate a type of study which may be pursued directly from the survey data.

## The Choice of Commuting Mode

Nearly 90 per cent of commuters in the metro-areas of Montreal, Toronto, Winnipeg, Edmonton and Vancouver use either the automobile or public transportation (transit) to travel to work. The factors affecting the choice between these two modes is the subject of the present study. Table 1 portrays the availability of transit and the degree of its use among commuters reporting that it was available. Among these metro areas, the availability was lowest in Edmonton and Vancouver and the usage was highest in Montreal and Toronto. Table 2 shows the proportion of commuters by mode and highlights not only the predominance of automobile commuting, but also the considerable variation among the metro areas in the use of transit. In Toronto, for example, almost a third of the commuters used public transportation while in Vancouver the proportion was less than a fifth.

Of course, it is to be expected that the larger cities can provide greater scope and convenience in their transit systems. For this reason, the modal choice analysis of this study attempts to estimate the net effects attributable to some commuter characteristics and the time and distance factors of their travel-to-work circumstances. This provides a basis for metro area comparison which is attractive, but detailed quantitative interpretation must be treated cautiously. The importance of this caveat will be obvious in view of the data limitations of the Travel-to-Work Survey with respect to the total range of factors that may be influencing commuter choice of mode[1]. Nevertheless, general interest in this area of research and the analysis of this type of data stem from the growing concern over the gradual shift from transit to automobile commuting, in spite of increasing efforts to promote the use of transit. Such research may shed some light on why these efforts have been largely ineffective.

## The Modal Choice Model

The model postulates that the choice of mode is a function of:

- –time by transit
- –distance to work
- –age/sex/marital status
- –occupation
- –survey year

The choice variable was assigned as 1 for transit and 0 for automobile. The survey provides the time and distance information only as categorical data, hence the model consists entirely of attribute variables. The means of the variables, expressed as percentages, are given in Table 3. The percentages refer to the population used for the model, namely the aggregate samples of 20,000 commuters, obtained in 1973, 1974, 1975 from the five metro areas, who stated that public transportation to work was available and who used this means or the automobile for commuting. Standard regression analysis has been used to estimate the model coefficients which may be interpreted as the net changes in the percentage of commuters using transit attributable to each variable (fixing the others at their means).[2]

---

[1] The 1976 survey data provide origin-destination information as well as a variety of additional commuter characteristics. The sampling frame has been restructured which makes comparisons with earlier data difficult at the sub-metro level.

For this study, models were estimated separately for the commuters resident in each of the five metropolitan areas, the inner city and periphery of each area, and also for the aggregated populations to provide a basis for comparison. The equations are displayed in Table 4.

In agreement with earlier work[3], the analyses have supported the following general conclusions concerning the commuter's modal choice decision:

**Transit time to work:** When the effects of distance are held constant, decreasing travel time induces increased use of public transportation for all but the shortest time categories. This effect is strongest for the periphery subpopulations.

**Distance to work:** Compensating for transit time, the propensity to use public transportation increases with distance, suggesting a continuing demand for express transit service.

**Commuter characteristics:** Sex, marital status and occupation are important determinants of modal choice. Females and commuters in the service occupations are more likely to use transit, particularly if they reside in the inner city. Unmarried commuters, particularly from the periphery, are more likely to use transit. The less significant factors of age and hours worked show generally similar patterns with minor metro variation.

**Annual trend:** Consistent with the long-term decline in the use of transit, the survey years show small decreases, hesitating slightly in 1974 with the onset of the "energy crisis". Metro area comparisons are suggestive, but the magnitude of the effects are small and would be confounded with local variations in transit service.

**Inner-city/periphery comparisons:** The time factor is generally stronger in effect for the inner city subpopulations. The opposite is true for the distance factor. This situation is probably reflecting the greater variation in transit convenience for periphery commuters.

## Future Research Potential of the Travel-to-Work Data

The model described has used a particular selection and condensation of the survey data. A much broader range of data is already available which includes additional detail of commuter characteristics such as occupation and industry of employment, alternate modes of commuting and the travel time by the usual mode. Other geographical delineations are possible, although data reliability quickly dissipates when disaggregating below the metro area level. The 1976 and subsequent surveys will further extend the range of data available and can be expected to support a broad spectrum of analytic research in this area.

---

[2] It must be routinely mentioned that modelling a dichotomous dependent variable violates a basic assumption for regression analysis: the normality of the error term. Logit analysis is more appropriate statistically, but the data bulk discouraged its use. The latter procedure also does not furnish significance statements for factors (groups of variables) which are important interpretive measures.

[*] The unequal distribution of the model subpopulations in Vancouver is due to the fact that the public transportation system is largely concentrated in the inner city area.

[1] The numbers in brackets are the F statistics for the factors (groups of variables). The coefficients are adjusted to a weighted mean of zero within each group, i.e. $\Sigma b_i^* P_i = 0$ where $P_i$ is the proportion of the population having attribute i, $b_i^*$ is the adjusted coefficient, and the summation is over members of a given factor. Thus, the adjusted coefficient is the *net* effect attributable to the variable.

[1] The numbers in brackets are the F statistics for the factors (groups of variables). The coefficients are adjusted to a weighted mean of zero within each group i.e. $\Sigma b^*_i P_i = 0$ where $P_i$ is the proportion of the population having attribute i, $b^*_i$ is the adjusted coefficient, and the summation is over members of a given factor. Thus, the adjusted coefficient is the *net* effect attributable to the variable.

# Observations

## Occupational Distribution of Employment

The Occupational Employment Survey (OES) conceived jointly by the Department of Employment and Immigration and Statistics Canada, was undertaken on an experimental basis in January 1973. A full-scale survey was carried out in 1975 and a third survey was begun in July 1977. The 1977 survey will be completed in August 1978 and the data are expected to be published in the fall of 1978. The OES is designed to measure the occupational distribution of the paid worker portion of the Canadian labour force.

Data collected during the calendar year 1975 has been recently released in a report entitled *Occupational Distribution of Employment: Canada and Provinces, 1975.* The survey covered approximately 80,000 reporting units in the private and public sectors. Job title information was collected for some 2,800,000 paid worker employees which represents approximately 36 per cent of the total paid worker population in 1975. The distribution is presented as estimates of employees, by occupational code, by province and by major industry division.

Additional information about the OES can be obtained from E.W. Norton (613-992-2006), Occupational Employment Survey Unit, Labour Division, Statistics Canada, Ottawa K1A 0T6.

*Occupational Distribution of Employment: Canada and Provinces, 1975* (Catalogue 72-515) can be ordered from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: $6.00. ☐

## Culture Statistics

In May 1976, the Education, Science and Culture Division of Statistics Canada issued a service bulletin entitled *Museums, Art Galleries and Related Institutions in Canada, 1974 and 1976: Preliminary Data for Large Institutions.* The report presented preliminary data on institutions with annual budgets over $100,000 and was based on early results of the 1974 survey of museum, art galleries and related institutions. The subpopulation reported on consisted 111 institutions.

Data on the entire universe surveyed in 1974 is now available and presented in a new publication entitled *Culture Statistics: Museums, Art Galleries and Related Institutions, 1974.* A total of 860 institutions are included in the data base as a result of having responded to the 1974 survey and having met the Statistics Canada definition of a museum (i.e., permanent collection, open to the public, non-commercial in nature). The data is reported primarily by institution type and geographic region. Most of the institution types are self explanatory. Aquaria, botanical gardens, arboretums, conservatories, zoos and wildlife refuges are included under "Living Science Museum". "Science: Natural and Technology Museums" refer to natural science museums, science and technology museums, planetaria and observatories. Historic buildings, restorations and pioneer villages are grouped under "Restorations".

The nature of the universe surveyed by Statistics Canada is very heterogeneous, both in terms of type and budget size. This report indicates their dispersion by region, budget size and institution type. By far the largest group are those institutions which define themselves as general museums. Approximately 27 per cent of all museums in Canada fall into this category. The next largest categories are restorations and history museums at approximately 19 per cent and 18 per cent respectively. Science museums as a group constitute less than 10 per cent of institutions surveyed and art galleries 8 per cent. A large percentage of the institutions are general museums and history related facilities, but the survey still covers a broad range of museums and related institutions. The institutions also vary considerably in size; 48 per cent are under $5,000 in budget size, 38 per cent between $5,000 and $100,000 and 14 per cent over $100,000.

The tables and charts reveal that Ontario has the largest share of most types of institutions. This is particularly true with art galleries and history related institutions.

The report also indicates that the bulk of history related institutions are less than $100,000 in budget size. This is because many of these institutions are small community museums serving a limited geographic area. On the other hand, less than 20 per cent of art galleries are less than $5,000 in budget size.

For the universe as a whole, attendance in 1974 was 41,460,866; a total very similar to the figure reported in 1972 for 850 museums. Of this total, living science museums accounted for the largest percentage of any institution type, 33 per cent of all museum visitors. Total operating expenditure for all institutions in 1974 was $103,555,589, an increase of $44,752,325 or 76 per cent from 1972 (850 museums again reporting in 1972). This dramatic jump can in part be explained by the reopening of two of the national museums during that time period.

Total operating income for all museums surveyed in 1974 stood at $107,317,937. History museums received a substantial share of their funds from provincial sources 42 per cent, reflecting the commitment many provincial departments and agencies have towards community museums. Both history related institutions and science museums received more funds on a percentage basis from provincial sources than any other level of government. Art galleries and other institutions conversely received their largest share of money from the federal government.

Readers can obtain more information about the report *Culture Statistics: Museums, Art Galleries and Related Institutions, 1974* (Catalogue 87-655) from Louis Meduri (613-993-6771), Cultural Institutions Section, Education, Science and Culture Division, Statistics Canada, Ottawa K1A 0T6. Copies of this report are available from the Publications Distribution Section of Statistics Canada. Price: .70 cents.

A more detailed analysis of attendance patterns, staff and sources of operating income is provided in another report entitled *Canadians and Museums: Statistics on Interest and Resources.* More information about this report can be obtained from the author, Terry Cheney, at the same address and telephone number as mentioned above.

It should also be pointed out that museum data for the year 1976 is presently being collected and analysed. Results from the 1976 survey should be available later this year. □

## Science Statistics

The following two service bulletins have been published by the Science Statistics Section:

**Federal Government Activities in the Natural Sciences** (Catalogue 13-003, Vol. 1, No. 4) covers all federal support for scientific research and experimental development (R & D) and related scientific activities in the natural sciences. These related activities are: scientific data collection, scientific information, texting and standardization, feasibility studies and education support. The natural sciences include biology, chemistry, physics, astronomy, geology and oceanography.

**Federal Government Activities in the Social Sciences** (Catalogue 13-003, Vol. 1, No. 5) is concerned with the scientific and technological activities of the federal government in the social sciences. The activities include disciplines such as anthropology, economics, history and sociology. The statistics cover R & D and the following related scientific activities: general purpose data collection, information services, economic and feasibility studies, operations and policy studies and education support.

Requests for more information about science statistics should be addressed to H. Stead (613-995-3014), Science Statistics Centre, Education, Science and Culture Division, Statistics Canada, Ottawa K1A 0T6.

Subscriptions to the monthly *Science Statistics Service Bulletin* (Catalogue 13-003) are available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: $1.40 per year. □

## Catalogue of Publications

A Catalogue supplement has been prepared to inform users of Statistics Canada data of changes in the publication program of the department which have occurred since the release of the *1976-1977 Catalogue of Publications.* The supplement presents abstracts for all new publications issued during the period July 1976 to June 1977 and lists discontinued publications, title changes and other changes for the same period. In addition, all publications to be issued from the 1976 Census are included. Finally, the supplement includes a title, subject and commodity index for all referenced publications.

A free copy of the *1976-1977 Catalogue of Publications* and of the supplement (11-204 E) can be obtained from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. ■

## Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

## Table 1: Population[1], by province (thousands)

| Year and quarter | | Canada | Nfld | P E I | N S | N B | Que | Ont | Man | Sask | Alta | B C | Yukon | N W T |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | D | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 |

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force

---

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. The counts for the year 1975 are provisional while those for the succeeding years are estimates. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates

## Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

## 1–Income and expenditure accounts

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

## 2—Domestic Product by Industry

### Table 2.2: Real domestic product by industry of origin, monthly volume indexes (1971 = 100), based on the 1970 standard industrial classification

| Year and month | Manufacturing industries | | | | | | | | | Transportation, storage & commun | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Metal fabricating ind. (ex mach & transp. equip. ind. | Machineries ind (ex electrical machinery | Transportation equipment industries | Electrical products industries | Non-metallic mineral products industries | Petroleum and coal products industries | Chemical and chem products industries | Miscellaneous manufacturing industries | Construction industry | Total | Transp. | Storage | Commun. |
| | 1971 industry weights | | | | | | | | | | | | |

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups from January 1973 forward are based on the 1970 Standard Industrial Classification. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 3 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 11. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 10. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.
[4] Except machinery and transportation equipment industries.

## Table 13: Average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification (dollars)

| Year and month | Industrial composite | Forestry | Mining, including milling | Manufacturing: Total | Manufacturing: Non-durable goods | Manufacturing: Durable goods | Construction | Transportation, communication and other utilities | Trade: Wholesale | Trade: Retail | Finance, insurance and real estate | Service |

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements.

## Section 6 · Manufacturing

70 1. Total Inventories, Shipments and Orders in Manufacturing
71 2. Manufacturing Shipments by Industry
73 3. Manufacturing Inventories by Industry
75 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
76 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
77 6. Estimated Value of Goods in Process and Finished Products by Economic Use Classification
78 7. Tobacco and Beverages
78 8. Rubber
79 9. Rubber Products
79 10. Raw Hides, Skins and Finished Leather
80 11. Footwear Production
81 12. Production of Sawn Lumber
81 13. Pulpwood, Wood Pulp and Newsprint
82 14. Primary Iron and Steel
83 15. New Motor Vehicles
84 16. Refrigerators, Freezers, Washing Machines and Clothes Dryers
84 17. Radio and Television Receiving Sets

## Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

| | | | | Inventory at end of month | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | All inventory held | | | | |
| Annual average [illegible] | Shipments[1] | New orders received during month[2] | Unfilled orders at end of month | Owned[3] | Held but not owned | Total | Raw materials | Goods in process | Finished products | Ratio of inventories owned to shipments |
| [illegible] | 310000 | 310060 | 310106 | 310336 | 310382 | 310152 | 310198 | 310244 | 310290 | 310530 |
| D | 310030 | 310083 | 310129 | 310359 | 310389 | 310175 | 310221 | 310267 | 310313 | 310531 |
| 1975 | 7,371.3 | 7,311.4 | 10,876.9 | 15,550.5 | 816.7 | 16,367.2 | 7,092.1 | 4,175.2 | 5,099.9 | 2.12 |

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments, for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks Note As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

---

[1] Because the supplementary classification for automative products consist of industries which are also included in the appropriate economic use group this series is inclusive of those aggregated for the Canada total. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

## Table 5. Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

| | Inventories owned | | | | | | | Inventories held raw materials | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Consumer goods | | | | | | | Consumer goods | | | | | | |
| Annual average and month | Non-durable | Durable | Machinery and equipment | Construction materials and components | Other intermediate goods & supplies | Export-based industries | Supplementary classification automotive products | Non-durable | Durable | Machinery and equipment | Construction materials and components | Other intermediate goods and supplies | Export based industries | Supplementary classification automotive products |

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965 Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences. [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

---

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act.

Note: Components may not add to totals due to rounding. [1]The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2]The above table covers all sales to users and includes sales by manufacturers through their dealers and agents as well as the sales of importers made directly to users. Even though sales are to users, i.e. farmers, values are stated at the dealer's net buying price or at wholesale price

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and arm house consumed [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

---

Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted [2] Production is alculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils nd fats. [4] Includes stocks held by manufacturers and other warehouses [5] Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood udding etc. [6] Includes solid, coated, bulk, packages and novelties

Note: Components may not add to totals because of rounding

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality this series is repeated in the unadjusted form

---

[1] Column numbers refer to tables 3 and 4 section 11 [2] Includes special transaction-trade, not shown separately [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Imports by Commodities (65-007), Statistics Canada.**

## Section 12 · Transportation

22 1. Carloadings of Revenue Freight
23 2. Operating Statistics of Canadian Railways
23 3. Operating Statistics of Air Carriers in Canada
24 4. Operating Statistics of Canadian Pipelines
24 5. Shipping Traffic

## Table 1: Carloadings of revenue freight on Canadian railways[1] (thousand cars)

| Year and month | Total railway revenue freight loadings (carload and non-carload) ('000 tons) | | Total revenue cars loaded (carload only) | Farm products and food | | | | | | Mine products | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | unadj | S.A. | | Wheat | Other grain and grain products | Fresh fruits and vegetables | Other agriculture products | Animals and their products | Prepared food products | Iron ore and concentrates | Other metal ores and concentrates | Potash | Coal, sand, cement and other mine products |

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series

---

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

Note: Components may not add to totals due to partial revisions

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares

[1] The number of stocks included has varied over the period, the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

# Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Summary Reference Index* (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

*CANSIM Main Base Series Directory* (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

*CANSIM Mini Base Series Directory* (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average per cent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## ditorial Board

his publication is produced under the guidance of he Canadian Statistical Review Editorial Board, omposed of the following Statistics Canada staff embers:

. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
.E. Drover – Director, User Advisory Services Division
.J. Lynch – Director, Prices Division
. Platek – Director, Household Surveys Development Division
.R. Podoluk – Director General, Household Statistics Branch
. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
N. Cholette – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## ubscriptions

he *Canadian Statistical Review* and other cata-ogued publications of Statistics Canada, including a ree annotated catalogue of current publications, ay be ordered from Publications Distribution, Sta-istics Canada, Ottawa, K1A 0T6 and remittances ade payable to the Receiver General for Canada.

weekly supplement containing data published etween release dates of this review is distributed ree of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 9, Table 10 – Sugar Statistics

The unit of measure for this table has been changed with this issue from million pounds to metric tonnes.

# National Income and Expenditure Accounts
## Fourth Quarter 1977 — Advance Information

### Summary

Gross National Product, seasonally adjusted at annual rates, increased 1.9 per cent in the fourth quarter to a level of $214.7 billion; in real terms – that is, after adjustment for price changes – GNP grew 0.8 per cent. This increase originated in the foreign sector, as exports rose 4.7 per cent in volume terms and real imports fell 1.5 per cent. The drop in import volume was caused, at least in part, by a 0.6 per cent decline in final domestic demand, with declines in personal expenditure, government current expenditure, and gross fixed capital formation.

The fourth quarter movements left GNP for the year as a whole up 9.3 per cent from 1976. This translates into a real increase of 2.6 per cent, compared with 4.9 per cent in 1976.

The year began strongly with real output growing 1.8 per cent in the first quarter, primarily on the strength of a 6.7 per cent increase in real exports, and a 5.1 per cent increase in real government expenditure. Personal expenditure, however, did not grow appreciably in the first quarter and declined 0.9 per cent in the second. With real exports almost unchanged in the second quarter and only modest growth in other expenditure aggregates, real output remained at about the first quarter level. The third quarter saw a resumption of real growth, as personal expenditure recovered and a decline in imports led to an improvement in real net exports, despite a drop in export volume. Renewed growth in real exports in the fourth quarter was then sufficient to offset the weakness in domestic demand and generate continued real growth, although at a much lower rate than in the third quarter.

The net effect of these quarterly movements was to leave seasonally adjusted real GNP in the fourth quarter 4.0 per cent above the level in the same quarter of the previous year, with most of the growth attributable to the strength in exports. Personal expenditure increased only 0.9 per cent in the same period, and real gross fixed capital formation declined 0.8 per cent. The weakness in domestic demand helped to lower imports, which fell 2.0 per cent from the fourth quarter of 1976 to the fourth quarter of 1977.

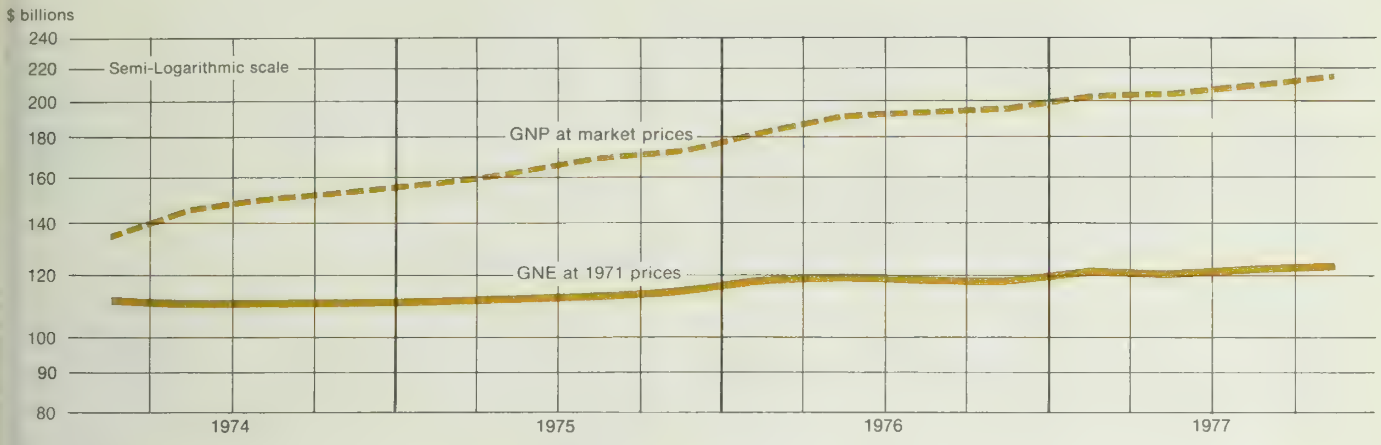
These changes from the fourth quarter of 1976 illustrate the extent to which the real sector of the economy was dominated in 1977 by the decline in the international value of the Canadian dollar, and the price movements which resulted from it. The 16.6 per cent increase in import prices from the fourth quarter of 1976 made a significant contribution to the increases in the implicit price indexes for most major expenditure aggregates. Prices of domestically produced goods and services, however, decelerated substantially, perhaps partly in response to the weakness in domestic demand and the moderate growth in labour costs. Labour income in the fourth quarter was 7.8 per cent higher than in the fourth quarter of 1976, the lowest quarterly change from the previous year in almost seven years, while the implicit GNE price index was up 5.5 per cent compared to the same quarter a year earlier, the lowest such increase since 1972.

Some substitution of domestically produced goods for imports apparently resulted from the differential rates of inflation in these two aggregates, as imports dropped to 25.4 per cent of final domestic demand from 26.1 per cent in the fourth quarter of 1976. The decline in the Canadian dollar also appeared to help export sales, which were up 9.8 per cent in real terms from a year earlier.

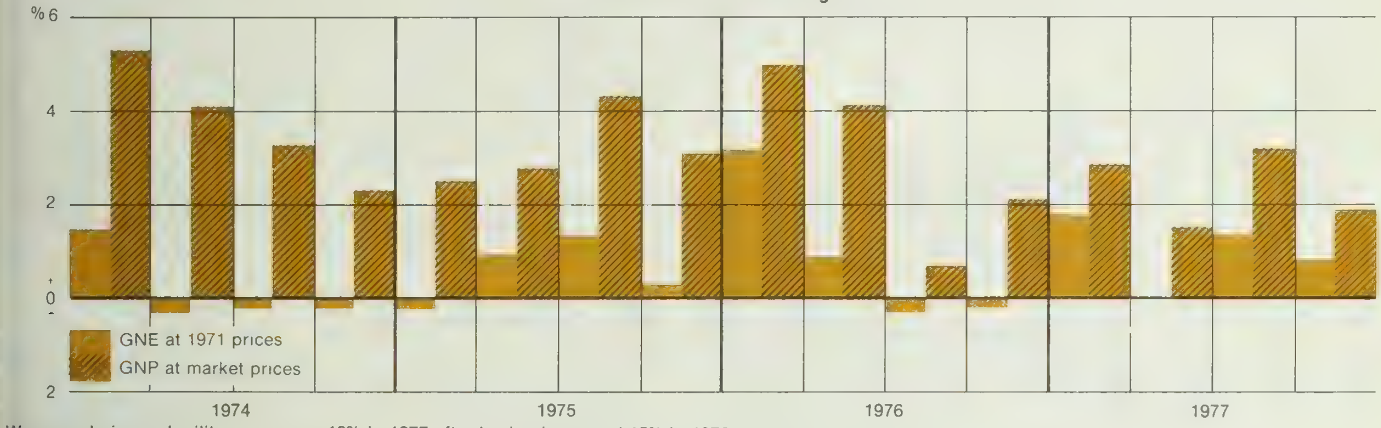
### 1977 Annual

The major source of strength in 1977 as a whole was external demand. Real exports were 7.7 per cent higher than in 1976, and with real imports increasing only 2.0 per cent, real net exports (real exports less real imports) contributed more than one percentage point to the increase in real GNP. Real personal expenditure and real government current expenditure on goods and services both grew at rates well below their long term averages, real gross

In 1977 Gross National Product increased 9.3% to a level of $207.7 billion; after adjustment for price changes, real GNP increased 2.6%.

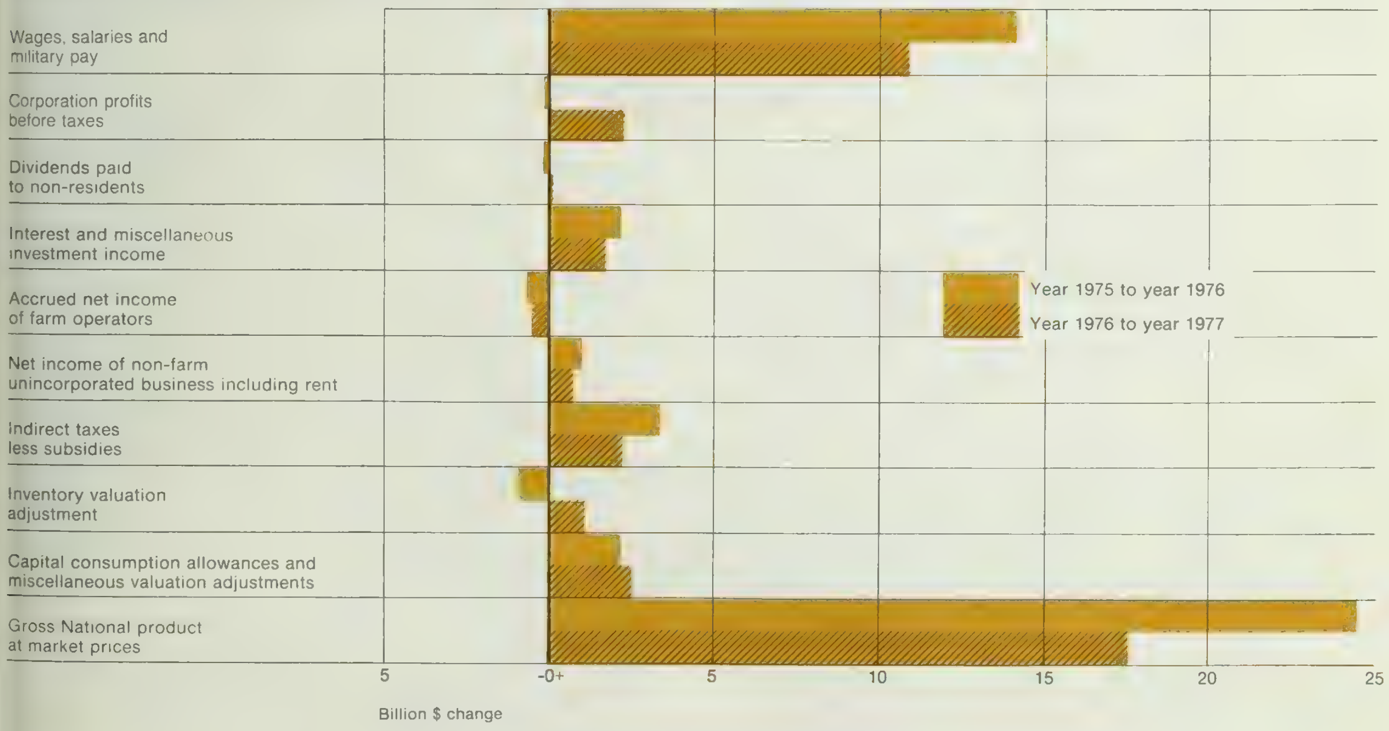


**Quarter-to-Quarter Change**



Wages, salaries and military pay rose 10% in 1977 after having increased 15% in 1976.
Corporation profits before taxes swung from a 0.3% decline in 1976 to an 11.4% increase in 1977.
Accrued net farm income continued to fall, declining 13.6% after a drop of 17.5% in 1976.

**Annual changes in GNP and components**



All quarterly data adjusted for seasonal variation and at annual rates fixed capital formation declined, and inventory investment fell substantially.

## Incomes

Wages, salaries, and supplementary labour income grew at about the same rate as total GNP in 1977, increasing 10.0 per cent after a 15.0 per cent rise in 1976. Corporation profits before taxes were up 11.4 per cent compared to 1976, and after tax profits increased 18.8 per cent. Other non-wage income grew 9.1 per cent, despite a 13.6 per cent decline in accrued net income of farm operators.

Personal disposable income increased 10.5 per cent in 1977 to a level of $139.3 billion, of which 10.7 per cent was saved. Total personal expenditure rose 10.3 per cent.

## Personal Expenditure

In real terms, personal expenditure increased 2.8 per cent in 1977, with the largest percentage increase – 5.2 per cent – in spending on services, reflecting higher net expenditure abroad and a large increase in spending on financial and legal services. Growth in durable expenditure fell to 2.4 per cent from 5.4 per cent in 1976, with the largest decline in spending on household appliances. Expenditure on semi-durable goods increased 1.0 per cent, as real expenditure on household furnishings was unchanged from the previous year, and spending on clothing and footwear declined. Expenditure on non-durables was up only 0.7 per cent reflecting only marginal growth in energy products as well as food, beverages, and tobacco.

## Fixed Capital Formation

Gross fixed capital formation fell 0.6 per cent in real terms in 1977, with all of the decline in business fixed investment. Business investment in residential construction fell 6.0 per cent, and machinery and equipment investment dropped 1.7 per cent. Because non-residential construction increased 3.7 per cent, total business investment in plant and equipment was virtually unchanged from 1976.

## Inventory Investment

After substantial accumulation in 1976, inventory investment swung to slight liquidation in real terms. Most of this swing was concentrated in the non-farm business sector, which accumulated by $122 million in 1977 after a very strong $1068 million accumulation in 1976. On an industry basis, wholesalers liquidated inventories by $105 million after an accumulation of $466 million in 1976. Retail trade recorded a moderate accumulation of $60 million in 1977, a decline of $411 million from the accumulation of $471 million in 1976. There was an accumulation of $95 million in manufacturing, approximately the same level as 1976. Additionally, farm inventories swung from an accumulation of $167 million in 1976 to a liquidation of $208 million in 1977.

## The External Sector

The 10.0 per cent rise in real exports of goods in 1977 was primarily the result of strong increases in exports of motor vehicles and parts and fabricated materials. Lumber and wheat exports were also strong in 1977. The weak 1.1 per cent increase in real imports of goods was the result of widespread declines in imports of food, crude and fabricated materials, and industrial machinery, partially offsetting large increases in imports of passenger cars and motor vehicle parts.

The service account continued to deteriorate in 1977, but at a slower rate than in 1976. This was primarily a result of a reduction in the rate of growth of tourism abroad, offsetting accelerating interest and dividend payments to non-residents.

## The Government Sector

Total revenues of all levels of government combined (excluding intergovernmental transfers) increased by 8.6 per cent in 1977, a much slower rate of increase than in 1976. Most of the revenue components showed sharply lower rates of growth in 1977 than in 1976, reflecting the lower rate of growth in incomes.

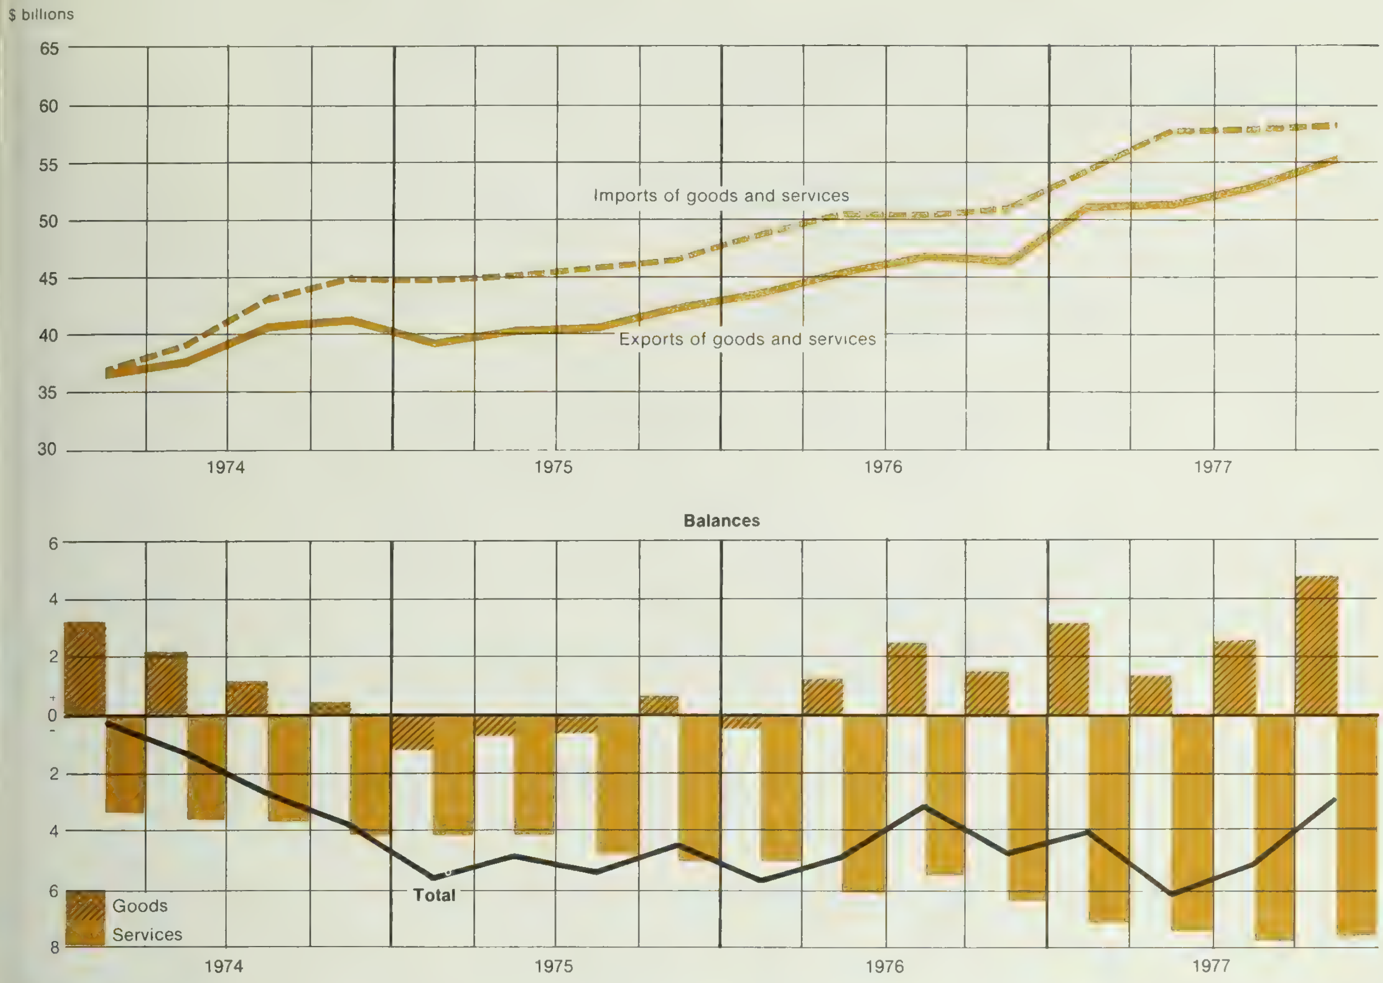
Total government expenditure rose by 11.2 per cent for the year, just somewhat lower than the 1976 rate of 12.4 per cent. Outlays on goods and services increased by 10.0 per cent, one of the smallest rates of change in several years, as wage and salary payments, which account for almost 60 per cent of total government expenditure on goods and services, grew by 9.5 per cent, after increases of about 20 per cent in the previous two years. Transfer payments to persons increased by 14.7 per cent, a rate similar to that of the previous year. With expenditures rising more rapidly than revenues, the deficit, on a national accounts basis, for the government sector as a whole, rose from $3.4 billion in 1976 to $5.6 billion in 1977.

## Fourth Quarter 1977

### Incomes

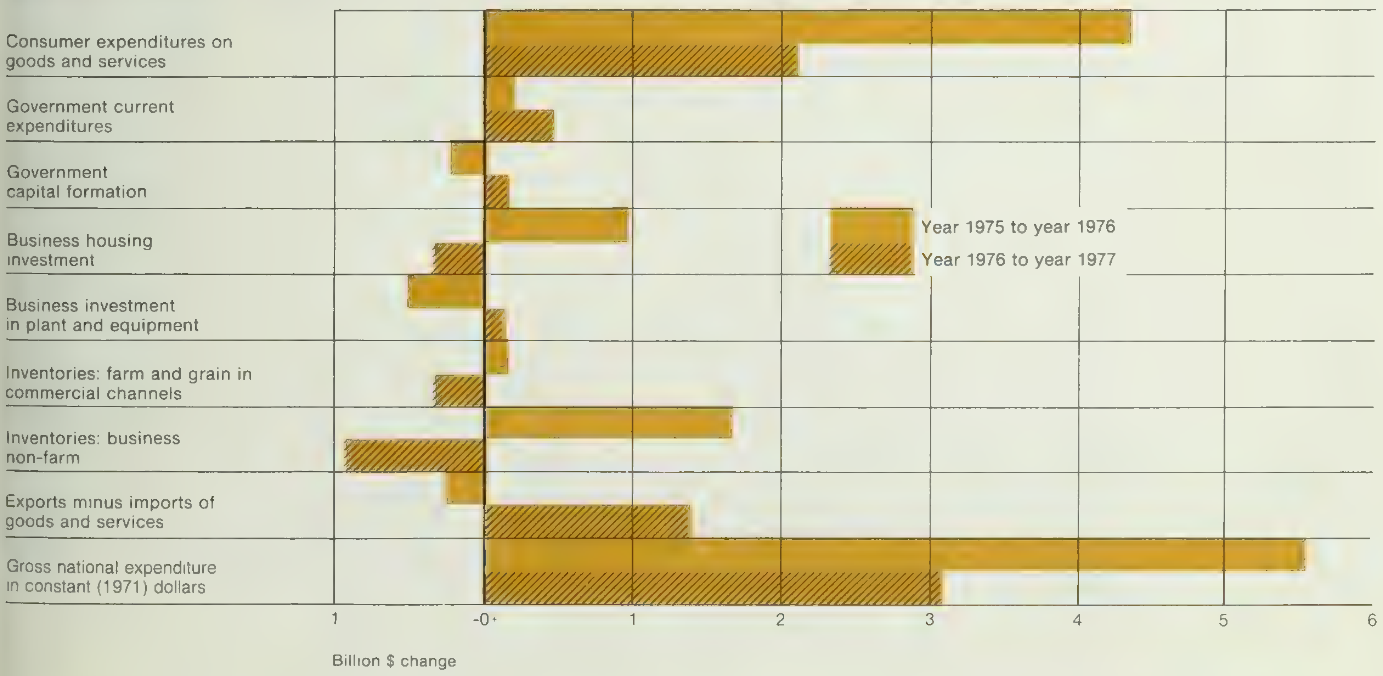
Wages, salaries, and supplementary labour income increased 1.5 per cent in the fourth quarter. Corporation profits before taxes were up 3.2 per cent from

Exports of goods and services increased 15.6% in 1977 while imports rose 14%. As a result, the balance of trade in goods and services improved slightly to a deficit of $4.6 billion from a deficit of $4.7 billion.



Real GNE grew 2.6% in 1977, with exports accounting for much of the growth. Real growth in consumer expenditure fell to 2.8% from 6.1% in 1976. All other final demand components increased, but at lower rates than in 1976.

**Annual changes in GNE and components**



All quarterly data adjusted for seasonal variation and at annual rates

¹ Excludes profits of government business enterprises.
² Includes the withholding tax applicable to this item.
³ Includes profits (net of losses) of government business enterprises and other government investment income.
⁴ Includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and for the change in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.
⁵ Includes net income of independent professional practitioners.
⁶ See footnote 4, Table 2.

---

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication *National Income and Expenditure Accounts, Third Quarter 1977* (Catalogue 13-001).

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.

[3] Includes capital expenditures by private and government business enterprises, private non commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

### Table 3. Gross National Expenditure in Constant (1971) Dollars, by Quarters, 1976 and 1977

Seasonally adjusted at annual rates[1]

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures are not suitable as indicators of quarter to quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter to quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

the third quarter, with the largest increases in mining, manufacturing, and trade. This increase left profits 22.8 per cent above the depressed level of the fourth quarter of 1976.

Interest, dividends, and miscellaneous investment income increased 4.0 per cent in the fourth quarter, and government transfers to persons and unincorporated business were up 4.0 per cent. These increases together with the rise in labour income more than offset a 8.2 per cent decline in farm income and very marginal growth in non-farm unincorporated business income, with the result that personal income grew 1.9 per cent. Because personal income tax collections declined from the third quarter, personal disposable income grew by a more rapid 2.7 per cent.

## Personal Expenditure

A higher proportion of personal disposable income was saved than in the third quarter, and personal expenditure grew a comparatively modest 1.7 per cent. Spending on semi- and non-durable goods was relatively strong, but service expenditure increased only 1.1 per cent and spending on durable goods declined 0.2 per cent. In real terms, personal expenditure was virtually unchanged from the third quarter. Durable expenditure fell 2.0 per cent, semi-durable expenditure was up 1.4 per cent, and expenditure on non-durables grew 0.4 per cent. Spending on services remained at about the third quarter level.

## Fixed Capital Formation

Gross fixed capital formation declined 1.0 per cent in the fourth quarter, which translates into a 2.1 per cent drop in real terms. Business investment in residential construction declined 4.4 per cent in real terms, reflecting a change in the composition of housing starts away from single family homes. The volume of business investment in machinery and equipment declined 3.7 per cent, and business investment in non-residential construction fell marginally. These movements left business investment in plant and equipment almost unchanged from the level of the fourth quarter of the previous year.

## Inventory Investment

Inventory investment fell considerably in the fourth quarter, as $164 million of stocks were liquidated after an accumulation of $516 million last quarter. The liquidation was confined to farm inventories, which fell by $744 million. About $540 million in non-farm business inventories were accumulated. This represents an increase of $432 million in real stocks, approximately the same accumulation as the previous quarter. The fourth quarter stock building was concentrated in wholesale trade, while in the third quarter it occurred primarily in manufacturing.

## External Sector

Exports of goods and services rose 5.1 per cent in the fourth quarter to a level of $55.2 billion. With imports growing only 0.7 per cent, the deficit in trade of goods and services improved by more than two billion dollars to $3.0 billion. About one-fifth of the improvement occurred in the foreign travel deficit. In real terms, exports were up 4.7 per cent while imports declined 1.5 per cent.

## Prices

The implicit price index for exports of goods and services rose only 0.4 per cent in the fourth quarter. This very modest increase played a major role in restraining the overall GNP price index, but it reflected a change in the composition of exports more than price changes per se. There was an irregular movement in the composition of exports in the third quarter, as automobile exports declined, apparently as a result of a longer than normal model changeover period. This movement raised the export price index at that time, and a return to a more 'normal' export mix in the fourth quarter reduced the impact of fourth quarter price changes. The effect of these weight shifts is illustrated by the fact that the Laspeyres export price index, which holds export composition constant, increased 1.8 per cent in the fourth quarter.

The implicit price index for non-residential construction also had a relatively modest fourth quarter increase, largely because of weak building material price increases. The implicit price index for personal expenditure, however, rose 1.8 per cent with the largest increase in the non-durable goods implicit price index. Overall, the implicit price index for GNE rose 1.8 per cent.

## The Government Sector

Total revenue of all levels of government combined (excluding intergovernmental transfers) increased by only 0.1 per cent in the fourth quarter of 1977 following a 2.7 per cent increase in the third quarter. Increases in revenues from indirect taxes, investment income and direct corporation taxes were almost offset by a decline in revenues from personal direct taxes.

Total government expenditures rose by 1.9 per cent in the quarter. The largest absolute increase was in transfer payments to persons, with the major part of the gain in federal unemployment insurance payments. Purchases of goods and services increased by 1.2 per cent, with small increases at the provincial, local and hospital levels.

Thus, with an increase in total government expenditure and relatively no growth in revenue, the government sector deficit, on a national accounts basis, and seasonally adjusted at annual rates, increased to $7.5 billion in the fourth quarter from a rate of $6.0 billion in the third quarter. ■

# Financial Activity in Canada
## Third Quarter 1977

The domestic non-financial sectors of the economy raised $10.0 billion in net new funds during the third quarter, a substantial increase over the $8.2 billion raised during the corresponding quarter of 1976. With the exception of the associated enterprises of governments all of the major sector of the economy participated in the increased borrowing[1]. Borrowing in the form of long-term financial instruments continued to be dominant and accounted for 81 per cent of the total funds raised by domestic non-financial borrowers (see Table 2). Compared to the flow of final goods and services, net new funds raised by these sectors as a percentage of GNP stood at 17.8 per cent during the quarter up from 15.7 per cent in the same quarter of the previous year. The major financing vehicles during the quarter were bonds and mortgages while the demand for consumer credit and bank loans remained weak. There was an increase in the pace of borrowing abroad by Canadians following subdued foreign borrowing in the second quarter. Short-term interest rates were subject to upward pressure during much of July and August, downward pressure during September, and ended the quarter slightly higher than they were at the quarter's outset. Long-term interest rates eased marginally over the quarter. The rate of expansion of the narrowly defined money stock accelerated over the previous quarter's rate and the Bank of Canada's target range for M1 was modified shortly after the end of the quarter.

### Real Economic Activity

Following a decline in real GNP in the second quarter, the pace of overall real economic activity ameliorated during the third quarter. The annual rate of growth of seasonally adjusted GNP was 5.3 per cent measured in constant dollars, or 12.4 per cent measured in current dollars. The major areas of expenditure strength were: personal expenditures on goods and services, particularly durables and semi-durables, business non-farm inventories, and the balance of transactions on goods and services with non-residents. Gross fixed capital formation continued to be weak and there was a decline in current expenditures on goods and services by the government sector.

### Short-term Paper and Bank Loans

Short-term paper outstanding, which remained essentially unchanged during the second quarter, increased by approximately $340 million during the third quarter. The quarter witnessed an increase in the short-term paper obligations of non-financial private and public enterprises, mortgage loan companies, venture capital companies, holding companies and the associated financial enterprises of the federal government; the short-term paper liabilities of consumer loan companies, sales finance companies, and local governments declined. In the case of the federal government, net new issues of treasury bills amounted to $615 million. Short-term interest rates, which had been falling during the first half of the year, rose during the first two months of the quarter and then reversed much of this rise in the last month of the quarter. The 90 day finance paper rate, for example, which stood at 6.99 per cent at the end of June, reached 7.51 per cent in August and ended the quarter at 7.25 per cent. The movements in the treasury bill rates followed more subdued, but similar, patterns. In the United States, on the other hand, short-term rates were subject to persistent upward pressure over the quarter and the uncovered short-term interest rate differential between Canada and the United States continued to shrink.

Bank loans continued to exhibit weak growth in the third quarter. Including foreign currency loans but excluding ordinary personal loans, which are treated as a component of consumer credit in the financial flow accounts, bank loans increased by $555 million, reaching a level of $49.1 billion at the end of the

---

[1] Borrowing by the non-financial government enterprise sector in the form of conventional market instruments amounted to $1.4 billion down from $2.0 billion in the third quarter of 1976 but up from $0.8 billion in the second quarter of this year.

Note: Since financial instruments are not homogeneous as to term the table is only indicative of broad tendencies.

quarter. Bank loans accounted for a minor proportion, 3 per cent, of total funds raised by the domestic non-financial sectors. The reduced demand for bank loans was, in part, associated with declines in non-farm inventories of $305 million for the non-financial private corporate sector and $43 million for the Canadian economy as a whole. The behaviour of the bank loan series in 1977 is obscured by the introduction of floating rate preferred shares, which appeared for the first time in the second quarter of 1977 and which appear to be a partial substitute for bank loans both from the point of view of lenders and borrowers[2]. The reduced emphasis on loans was not confined to bank loans and there was a small decrease in the other loan liabilities of the domestic non-financial sectors. The interest rate on prime business loans which declined by 50 basis points to 8.25 per cent following the change in the Bank Rate in the second quarter, remained unchanged during the third quarter.

## Bonds

Gross new issues of bonds increased marginally to $5.6 billion in the third from $5.5 billion in the second. Excluding securities directly placed with the social security system (Sector XII) net new issues of bonds amounted to $3.9 billion up from $3.3 billion in the previous quarter. Approximately 76 per cent of the increase was attributable to the public sector (including government enterprises). Following two quarters of reduced borrowing activity, the non-financial associated enterprises of governments were once again heavy borrowers in the bond market raising $1.3 billion in net new funds. The foreign sector continued to be the dominant factor on the supply of funds side, acquiring $1.8 billion or 46 per cent of the net increase in bonds outstanding. While provincial governments and their utilities accounted for well over half of the Canadian borrowing in foreign bond markets, borrowing by the private corporate sector abroad was also substantial. Net new issues of corporate bonds abroad amounted to $484 million, while non-residents also purchased $19 million in Canadian corporate bonds that were outstanding. During the second quarter of 1977 sales of new issues of Canadian securities in Europe surpassed sales in the United States; in the third quarter the United States resumed its position as the principal source of funds abroad for Canadian borrowers. Long-term interest rates moved down by about 10 basis points over the quarter. Combined with some upward movement in short-term rates, the yield curve flattened slightly. The quarter closed with the yield to maturity on long-term Government of Canada bonds at 8.61 per cent and the yield to maturity on industrials at 9.55 per cent. There was a modest narrowing of the long-term interest rate differential between Canada and the United States.

## Shares

Net new issues of stocks amounted to $578 million, down from $1131 million in the second quarter. As in the second quarter, new issues were mainly accounted for by the non-financial private corporate sector, with floating rate preferred shares being paramount. The chartered banks accounted for hart — 3

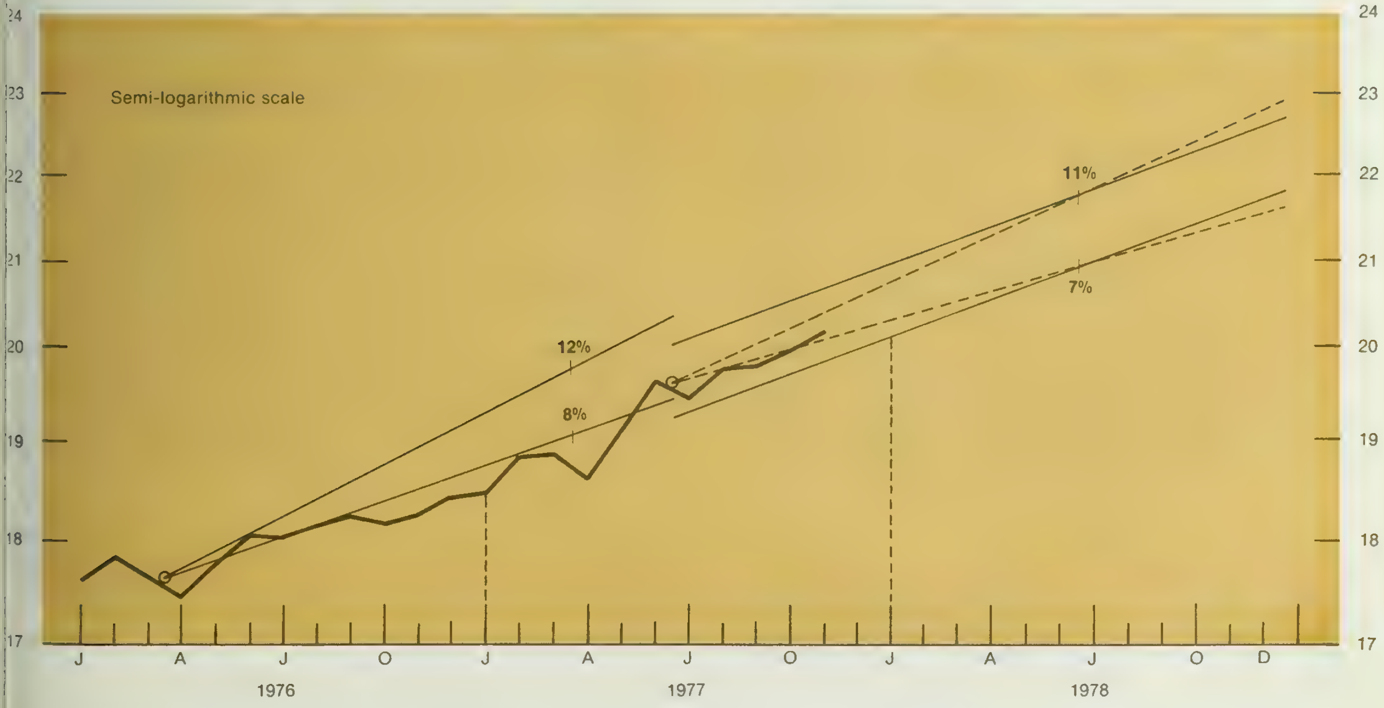
## Ioney Supply[1] and Target Growth Rates

Seasonally Adjusted)



(1) Currency outside banks plus canadian dollar demand deposits at chartered banks.

almost all of the acquisitions of newly issued preferred shares during the third quarter. There was a decline in stock prices during the third quarter; the Toronto Stock Exchange composite index closed the quarter at 1,000.1 down from 1,031.2 at the end of June. Declines were concentrated in metals and minerals, paper and forest products, and financial services. The indices for gold as well as oil and gas increased. In the United States' stock exchanges, declines also dominated advances for the quarter as a whole. The Standard and Poor industrial index, for example, declined from 109.5 at the end of the second quarter to 105.9 at the end of the third. Reasons advanced for the declines in the United States during this period include: increased investor uncertainty over the continuation of the recovery, prospects for corporate profits and rising interest rates.

## Consumer Credit and Mortgages

Consumer credit outstanding increased by $810 million reaching a level of $29.9 billion at the end of the quarter. The net increase in consumer credit during the third quarter of 1977 was 22 per cent below the flow that occurred in the corresponding three month period of 1976. The weakness in the demand for consumer credit was accompanied by widespread reductions in interest rates on consumer loans. While the demand for consumer credit was slack, consumer expenditures on durables and semi-durables was one of the stronger components of aggregate demand during the quarter. Using seasonally unadjusted data[3], the flow of expenditures on consumer durables and semi-durables in the third quarter of 1977 was 9.2 per cent higher than in the third quarter of 1976. Since total borrowing by the household sector was up strongly from the same quarter in 1976, it seems reasonable to suggest that other forms of borrowing, particularly mortgage borrowing, may have been partly undertaken with a view to financing the acquisition of consumer durables. Other factors which may have depressed the demand for consumer credit and at the same time increased the demand for durables and which would be of a transitory nature are the changes that were made in the tax treatment of withdrawals from Registered Retirement Savings Plans and Registered Home Ownership Savings Plans[4].

Mortgages accounted for over 39 per cent of the total volume of funds raised by the domestic non-financial sectors of the economy. Net mortgage lending to non-financial borrowers, at $3.9 billion, was insignificantly below the record volume of $4.0 billion in the previous quarter, but substantially above the third quarter 1976 flow of $2.9 billion. Private expenditures on residential construction amounted to $3.6 billion, essentially unchanged from the flow experienced in the third quarter of 1976. As in the first two quarters of 1977 housing starts were below the 1976 pace. There was a rise, particularly in the case of multiples, in the number of newly completed but as yet unoccupied dwellings in urban centres. Mortgage interest rates remained essentially unchanged over the quarter with the convential mortgage rate standing at 10.32 per cent at quarter's end.

## Primary Lending

The domestic non-financial sectors of the economy increased their portfolios of conventional financial assets by $6.5 billion over the quarter, a 17 per cent increase over the flow in the third of 1976. During the first half of 1977 a significant proportion (about 20 per cent) of primary lending was direct; direct lending in third quarter, while not unimportant, was much less substantial than it was earlier in the year.

## Monetary Aggregates

Close to $3.1 billion or 28 per cent of the total volume of funds raised was intermediated by the chartered banks (see Table 1). The deposit inflow to the banks amounted to $3.9 billion, with foreign currency deposits accounting for a large proportion (45 per cent) of the total. The increase in Canadian dollar denominated deposits was confined to term and notice deposits and personal saving deposits; the demand deposit liabilities of the banks declined by $198 million. While the interest rate on non-chequable saving deposits remained at 5.75 per cent throughout the quarter, the rates on 90 day deposit receipts and swapped deposits followed the same pattern as other short-term market rates of interest and peaked in mid-quarter. The near-banks experienced a strong inflow of funds during the quarter and their deposit liabilities increased by $1.6 billion.

---

[3] Since the financial flow accounts are not seasonally adjusted, expenditure data which are not adjusted are used. Stable seasonals are not a characteristic of the financial flow accounts. See, "Seasonality in the Financial Flow Accounts" *Financial Flow Accounts* IV, 1975.

[4] See Jean Chrétien, Minister of Finance, *Economic and Fiscal Statement* (Ottawa: Department of Finance, Oct. 20, 1977) pp.29-30.

he rate of growth of the narrowly defined money upply (M1) accelerated in the third quarter to 12 per cent at annual rates from 8.4 per cent in the econd[5]. During the third quarter the target range for he growth of M1 was 8 per cent to 12 per cent and had as its base the three month period centered on March 1976. Over much of the period during which his target range was applicable, the growth in the money stock has been close to or below the lower bound of the target and the efforts of the monetary authorities have been directed towards stimulating he expansion of the money supply. Over the summer months it was widely assumed that a reduction in the arget range for the growth rate of M1 was imminent.

On October 7, 1977 the Governor of the Bank of Canada announced a revised target range of 7 per cent to 11 per cent, with the average outstanding M1 for June 1977 as the base. The interpretation of he target range was substantially modified at that ime, however. The new target is a band of uniform width around the mid-point of the target range, (see Chart 3). The band can be determined by increasing (decreasing) the June 1977 base period observation by 2 per cent to obtain an upper (lower) base and applying a 9 per cent growth rate. The change in the interpretation of the target range has the effect of widening the target range in the time interval of up o one year from the base period.

One of the undesirable side effects of the announcement of monetary growth targets, which has emerged in a number of countries, is the over-interpretation of short-run movements in the money supply by the financial community and general public. For example, if the growth of the money supply is above the upper limit of the target range, the public may anticipate that the monetary authorities will follow a restrictive monetary policy to force up interest rates so as to bring the rate of growth of the money supply back within the target range. Similarly if the growth of the money supply is below the lower bound of the target range, the public may expect that the monetary authorities will encourage a reduction in interest rates to stimulate monetary growth. The interest rate expectations so engendered may distort financial markets as well as introduce additional complications for policy making.

## The Exchange Rate and International Reserves

The monetary authorities intervened in the foreign exchange market on several occasions to moderate fluctuations in the Canadian dollar which was subject to downward pressure in the third quarter, particularly in August. These transactions primarily accounted for a reduction of $352 million in Canada's official international reserves which stood at $4.8 billion in terms of United States dollars at the end of the quarter. Measured in terms of the United States currency the Canadian dollar closed the third quarter at $0.9306 down from $0.9440 at the end of June.

Note: *The Financial Flow Accounts* (Catalogue 13-002) contains a detailed record of Canadian financial activity. Instructions on how to construct the financial summary table (Table 1) from either published data in the *Financial Flow Accounts* or from CANSIM series are available upon request. Inquiries should be directed to: Statistics Canada, Financial Flows And Multinational Enterprises Division, Financial Flows Section, 21st floor, Coats Bldg., Ottawa K1A 0T6. ■

---

[5] Quarterly averages of seasonally adjusted Wednesdays data were used in calculating the growth rates for the monetary aggregates. The narrowly defined money supply consists of currency and Canadian dollar demand deposits at chartered banks held by the public.

# Observations

## The Input-Output Structure of the Canadian Economy in 1961 prices 1961-1971

This report present annual Input-Output Tables in Constant 1961 prices, for Canada and covers the years 1961-71. Corresponding current price estimates were published earlier in the publication *The Input-Output Structure of the Canadian Economy, 1961-71* (Catalogue 15-506 E). Current price estimates for the years 1972-74 are presently under preparation and are scheduled for completion by mid 1978. Shortly afterwards, constant price tables for the years 1972-74 will be prepared. At that time, it is hoped that constant price series for the entire period 1961-74 will be rebased in 1971 prices.

It should be noted that a rebasing of Input-Output Tables presents a problem not found in constant price Gross National Expenditure or Gross Domestic Product data, that is, there is no way to handle adjusting entries. The immediate solution is to convert the entire time series to a 1971 weight and reference base. This solution is less than ideal, particularly as the time series becomes longer, and price dispersion greater. This is one of the theoretical problems, with practical implications, that is under investigation by the Input-Output Division.

The deflation process has been carried for each year for 191 industries, 595 commodities and three primary inputs (commodity indirect taxes, other indirect taxes and subsidies) and 136 categories of final demand. Gross Domestic Product at factor cost was calculated residually through the use of double deflation. The reader is referred to the chapter on Deflation for further detail.

Three tables have been prepared and presented for each year: (1) Make Matrix (2) Use Matrix, and (3) Final Demand Matrix. At the most detailed level, described as the L level of aggregation, many of the entries in the various matrices are confidential under provisions of the Statistics Act. Though all of the tables are prepared at the L level of aggregation, it is only at the aggregation levels S and M that tables are published. The dimensions of these aggregations are given below:

| Description of aggregation | Number of industries | Number of final demand categories | Number of commodities and primary inputs |
|---|---|---|---|
| S | 16 | 14 | 49 |
| M | 43 | 14 | 100 |
| L | 191 | 136 | 602 |

Tables at aggregations S and M are presented in this volume for each year. Some cells of the Make Matrix at aggregation M are confidential. These cells have been suppressed though industry totals and commodity totals have been preserved.

As noted, the Make Matrix (matrix of the values of commodity outputs), Use Matrix (matrix of the values of intermediate commodity inputs as well as primary inputs) and Final Demand Matrix are presented for each year. Chapter 1 gives the conceptual framework of the Canadian Input-Output Tables and contains a description of these matrices and their interconnections. Chapter 2 describes the deflation process, double deflation and reviews the constant price results. The reader is referred to the chapters on Classification Systems and Special Definitions in the current price publication of the Input-Output Tables (Catalogue 15-506E). For the convenience of the reader, the Appendix on Aggregation Parameters is repeated (from 15-506E) in this publication.

The Input-Output Structure of the Canadian Economy, in constant 1961 prices, 1961-1971 (Catalogue 15-507E) can be obtained from Publications Distribution, Statistics Canada, Ottawa, Ontario K1A 0T6. Price: $3.50.

Inquiries about this publication should be addressed to K. Lal, Director, Input-Output Division, Statistics Canada, Ottawa, Ontario K1A 0T6. (613-992-3641).

## Year Book Special Edition

The *Canada Year Book 1976-77* (11-202E), a review of economic, social and political developments compiled by Statistics Canada, is ready for distribution in a special edition. The current issue is special because it covers information for two years and it bridges Canada's transition to the metric system of measurement from the imperial.

In every instance throughout the more than 1,100 pages of this edition text and table references to imperial measures are accompanied by metric equivalents. There is a special article on Canada's move to metric measurement and a table of conversion factors for weights and measures in the Canadian imperial and United States systems to the International System (SI) of metric measurement. A colour code differentiates at a glance between imperial and metric tables. Future editions of the book will carry metric measurements only for the many social and economic areas where conversion has been completed.

As well as the special metric aspects, the current volume covers two years of change and development in Canada in chapters devoted to agriculture, banking, culture, communications, education, energy, federal and provincial governments, health, housing, incomes, labour, manufacturing, merchandising, population, resources, scientific research and transportation. Appendices include such information as a summary of recent legislation, a chronology of Canadian events over two years, Canadian honours and a list of books about Canada.

Bound in hardcover and available in English or French editions, the book costs $12.50 in Canada and $15.00 in other countries. To order, send a cheque or money order payable to the Receiver-General for Canada to Publications Distribution, Statistics Canada, Ottawa K1A 0T6; or Printing and Publishing, Supply and Services Canada, Ottawa K1A 0S9. It is also available through selected booksellers. ☐

## Manufacturing industries of Canada sub-provincial areas, 1974

The 1974 issue of *Manufacturing Industries of Canada: Sub-provincial Areas* is the first since 1972. Due to problems encountered in the implementation of the Standard Geographic Classification codes to the Census of Manufactures, a delay in making 1973 data available occurred. In order to keep up with demand for more current information, no 1973 issue of this report will be forthcoming. However, a few summary tables of 1973 statistics have been incorporated in this report. These summary tables of 1973 data will show the all-industry data for economic regions, Census Metropolitan Areas (CMA's), selected Census agglomerations (CA's), municipalities and counties.

The main tables of this report present the principal statistics compiled at one or more of three levels of aggregation (all industry, industry group or industry) for economic regions, CMA's selected CA's, specified municipalities and counties. The specified municipalities listed at the all-industry level are those with shipments of goods of own manufacture of $750,000 or more in 1974 ($600,000 in 1973) which were publishable in accordance to the provisions of the Statistics Act.

For further information about this report, contact D.S. Wilson, (613-996-4991), Regional Statistics Section, Manufacturing and Primary Industries Division, Statistics Canada, Ottawa K1A 0T6.

*Manufacturing industries of Canada: sub-provincial areas*, 1974 (Catalogue 31-209) can be obtained from Publications Distribution Statistics Canada, Ottawa, K1A 0T6. Price: $6.00 ☐

## New Guide to Finding and Using Statistics in Retailing

A free guide for retailers on how to use statistics to improve their business has recently been published by Statistics Canada. Entitled "How a Retailer Can Profit from Facts", it shows how statistics can be used in choosing a location, estimating the market, learning about potential customers, comparing costs with those of similar firms, forecasting demand and reaching the right market when advertising.

Five case studies are included, as well as sections on finding statistics, understanding the jargon and using statistics.

This guide is the second of a series being published for use by various kinds of smaller businesses. The first was prepared for manufacturers. These booklets are prepared by User Advisory Services, a Statistics Canada division with offices across Canada that assist businesses by providing an inquiry and reference service with access to published and unpublished information.

Large companies with resident economic and research staff are aware of the kinds of information published by Statistics Canada and how it can be used. This new booklet is intended primarily for smaller retail merchants who are not aware of the wealth of information available and have little or no training in the uses of statistics. A free copy of the guide is available from User Advisory Services Statistics Canada, Ottawa K1A 0T6, or from the division's eight regional offices.

For further information regarding this guide, contact Mr. Ellis Drover, Director, User Advisory Services, (613) 996-5841, Statistics Canada, Ottawa K1A 0T6. ■

# Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

## Table 1: Population[1], by province (thousands)

| Year and quarter | Canada | Nfld | P.E.I. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Yukon | N.W.T. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| D | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 |
| 1976 June | 22,992.6 | 557.7 | 118.2 | 828.6 | 677.3 | 6,234.5 | 8,264.5 | 1,021.5 | 921.3 | 1,838.0 | 2,466.6 | 21.8 | 42.6 |
| 1977 June | 23,291.1 | 562.5 | 120.3 | 835.4 | 686.4 | 6,283.1 | 8,373.5 | 1,031.3 | 936.5 | 1,899.7 | 2,497.6 | 21.5 | 43.3 |
| 1975 Jan. | 22,568.7 | 546.4 | 116.6 | 816.7 | 660.7 | 6,155.6 | 8,124.9 | 1,009.8 | 902.3 | 1,755.7 | 2,418.3 | 21.1 | 40.6 |
| Apr. | 22,639.4 | 547.8 | 116.9 | 818.5 | 663.3 | 6,167.2 | 8,149.8 | 1,012.1 | 904.9 | 1,768.9 | 2,427.9 | 21.2 | 40.9 |
| July | 22,726.9 | 550.1 | 117.4 | 820.3 | 666.2 | 6,184.5 | 8,181.9 | 1,015.0 | 908.8 | 1,782.5 | 2,437.5 | 21.4 | 41.3 |
| Oct. | 22,815.7 | 552.8 | 117.7 | 824.0 | 670.8 | 6,198.6 | 8,211.8 | 1,016.0 | 913.5 | 1,799.0 | 2,447.9 | 21.6 | 42.0 |
| 1976 Jan. | 22,883.9 | 554.8 | 118.0 | 826.5 | 673.8 | 6,211.5 | 8,228.8 | 1,018.2 | 916.7 | 1,814.4 | 2,457.1 | 21.8 | 42.3 |
| Apr. | 22,946.3 | 556.1 | 118.0 | 827.7 | 675.9 | 6,224.6 | 8,250.0 | 1,020.3 | 919.6 | 1,828.1 | 2,461.8 | 21.8 | 42.4 |
| July | 23,025.4 | 558.5 | 118.4 | 829.4 | 678.2 | 6,240.0 | 8,278.1 | 1,022.1 | 922.5 | 1,843.7 | 2,469.8 | 22.0 | 42.7 |

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506.

[2] Includes logging, fishing, trapping and hunting.

[3] Includes mechanical and construction.

[4] Includes a small number in non-specified occupations.

[5] Does not include students entering Canada on students' visas.

[6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. The counts for the year 1975 are provisional while those for the succeeding years are estimates. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation)

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups from January 1973 forward are based on the 1970 Standard Industrial Classification. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 3 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 11. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 10. [3] In addition to those listed, tobacco products; knitting mills, printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.
[4] Except machinery and transportation equipment industries

Table 13 Average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification (dollars)

---

The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater ıdustrial and area detail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills; printing, ublishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974.

[2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements

# Section 6 · Manufacturing

70 1. Total Inventories, Shipments and Orders in Manufacturing
71 2. Manufacturing Shipments by Industry
73 3. Manufacturing Inventories by Industry
75 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
76 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
77 6. Estimated Value of Goods in Process and Finished Products by Economic Use Classification
78 7. Tobacco and Beverages
78 8. Rubber
79 9. Rubber Products
79 10. Raw Hides, Skins and Finished Leather
80 11. Footwear Production
81 12. Production of Sawn Lumber
81 13. Pulpwood, Wood Pulp and Newsprint
82 14. Primary Iron and Steel
83 15. New Motor Vehicles
84 16. Refrigerators, Freezers, Washing Machines and Clothes Dryers
84 17. Radio and Television Receiving Sets

## Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

| | | | | Inventory at end of month | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | All inventory held | | | | |
| Annual average and month | Shipments[1] | New orders received during month[2] | Unfilled orders at end of month | Owned[3] | Held but not owned | Total | Raw materials | Goods in process | Finished products | Ratio of inventories owned to shipments |
| D | 310000 | 310060 | 310106 | 310336 | 310382 | 310152 | 310198 | 310244 | 310290 | 310530 |
| D | 310030 | 310083 | 310129 | 310359 | 310389 | 310175 | 310221 | 310267 | 310313 | 310531 |
| 1975 | 7,371.3 | 7,311.4 | 10,876.9 | 15,550.5 | 816.7 | 16,367.2 | 7,092.1 | 4,175.2 | 5,099.9 | 2.12 |

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in lar intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, ne of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manu facturers including warehouse stocks. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in larg intermittent shipments; for these a monthly estimate of work put in place has been estimated. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

---

[1] Because the supplementary classification for automative products consist of industries which are also included in the appropriate economic use group this series is inclusive of those aggregated for the Canada total. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 5 Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

| | Inventories owned | | | | | | | Inventories held raw materials | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Consumer goods | | | | | | | Consumer goods | | | | | | |
| Annual average and month | Non-durable | Durable | Machinery and equipment | Construction materials and components | Other intermediate goods & supplies | Export-based industries | Supplementary classification automotive products | Non-durable | Durable | Machinery and equipment | Construction materials and components | Other intermediate goods and supplies | Export based industries | Supple men tary clas sification auto motiv product |

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Exports by Commodities (65-004), Imports by Commodities (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1]Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes plus. [3]Gross new production by field less field flared and waste.
